Rule1	Any	Any	Require inbound and request outbound

All the connection security rules are enabled and configured to use only the Computer (Kerberos VS) authentication method.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
If Computer1 initiates communication to Computer2, network traffic will be encrypted.	○	○
Computer2 can establish communications to Computer3.	○	○
If Computer3 initiates communication to Computer1, network traffic will be encrypted.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
NO NO NO
Traffic will not be encrypted by default. The question does not have this option configured by default. Encryption is optional, not default to authentications. Encryption needs to be enabled in the GPO. The default is data integrity which is not default to encrypt. Actually, if you encrypt you will use both integrity with encryption. Devices in the encryption zone require authentication to communicate with other devices.

NEW QUESTION 359
- (Exam Topic 4)
Your company is not connected to the internet. The company purchases several new computers with Windows 10 Pro for its users.
None of the new computers are activated.
You need to activate the computers without connecting the network to the Internet.
What should you do?

A. Make use of the Volume Activation Management Tool (VAMT).
B. Make use of the Key Management Service (KMS).
C. Make use of the Windows Process Activation Service.
D. Run the Get-WmiObject -query cmdlet.

Answer: B

Explanation:
You can configure one of the computers as a Key Management Service (KMS) host and activate the KMS host by phone. The other computers in the isolated network can then activate using the KMS host.
Installing a KMS host key on a computer running Windows 10 allows you to activate other computers running Windows 10 against this KMS host and earlier versions of the client operating system, such as Windows 8.1 or Windows 7. Clients locate the KMS server by using resource records in DNS, so some configuration of DNS may be required. This scenario can be beneficial if your organization uses volume activation for clients and MAK-based activation for a smaller number of servers. To enable KMS functionality, a KMS key is installed on a KMS host; then, the host is activated over the Internet or by phone using Microsoft's activation services.
