

Exam Questions PSM-I

Professional Scrum Master I

<https://www.2passeasy.com/dumps/PSM-I/>

NEW QUESTION 1

When does the second Sprint start?

- A. Once the architectural changes for the second Sprint have been approved by the senior architect.
- B. After the Product Backlog for the second Sprint has been selected.
- C. Immediately after the first Sprint.
- D. After the customer completes acceptance testing of the first Sprint.

Answer: C

Explanation:

The correct answer is C, because the second Sprint starts immediately after the first Sprint. The Scrum Guide states that “Sprints have consistent durations throughout a development effort. A new Sprint starts immediately after the conclusion of the previous Sprint.”

NEW QUESTION 2

What may be included in the Sprint Backlog? (choose the best answer)

- A. User Stories
- B. Tasks
- C. Use Cases
- D. Tests
- E. Any of the above (or others) which are a decomposition of the selected Product Backlog items

Answer: E

Explanation:

According to the Scrum Guide, the Sprint Backlog may include any items that are a decomposition of the selected Product Backlog items, such as user stories, tasks, use cases, tests, or others. The Sprint Backlog is the Developers’ plan for the Sprint, and it contains all the work that they forecast they can do to achieve the Sprint Goal and create a “Done” Increment. The other options are not valid, as they are either too specific (such as user stories or tasks) or too vague (such as tests).

NEW QUESTION 3

What is the function or purpose of management in Scrum? (choose the best answer)

- A. To identify and remove people that are not working hard enough.
- B. To monitor the productivity of the Developers.
- C. To present the Scrum Teams with insights and resources that help them improve.
- D. To continually monitor staffing levels of the Scrum Team.

Answer: C

Explanation:

The best answer is C. The function or purpose of management in Scrum is to present the Scrum Teams with insights and resources that help them improve. According to the article What is the Function or Purpose of Management in Scrum?, management is still critical to providing vision, securing resources, hiring talent, training teams, removing roadblocks, and continuously improving. Management also encourages collaboration and establishes Scrum Team autonomy, which are essential for Scrum’s values and principles. A, B and D are not good answers because they imply a command-and-control approach that contradicts Scrum’s values of respect, openness, and self-organization. Management in Scrum is not supposed to micromanage, judge, or interfere with the work of the Developers, but rather support them and enable them to deliver value.

NEW QUESTION 4

An organization has decided to adopt Scrum, but management wants to change the terminology to fit with terminology already used. What will likely happen if this is done? (Choose the best answer.)

- A. Without a new vocabulary as a reminder of the change, very little change may actually happen.
- B. The organization may not understand what has changed within Scrum and the benefits of Scrum may be lost.
- C. Management may feel less anxious.
- D. All answers apply.

Answer: D

Explanation:

According to the Scrum Guide, changing the terminology of Scrum may have negative consequences, such as losing the benefits of Scrum, not understanding what has changed, or having very little change at all. Therefore, all answers apply to this question. The Scrum Guide recommends using the same terminology as in the guide to avoid confusion and misunderstanding.

NEW QUESTION 5

Which of the following might the Scrum Team discuss during a Sprint Retrospective?

- A. Methods of communication.
- B. The way the Scrum Team does Sprint Planning.
- C. Skills needed to improve the Development Team’s ability to deliver.
- D. Its Definition of “Done”.
- E. All of the above.

Answer: E

Explanation:

The correct answer is E, because all of these topics can be discussed during a Sprint Retrospective. The Scrum Guide states that “the purpose of the Sprint Retrospective is to plan ways to increase quality and effectiveness.

... During each Sprint Retrospective, the Scrum Team plans ways to improve product quality by adapting the definition of ‘Done’ as appropriate.” Therefore, the Scrum Team can discuss any aspect of their process, communication, skills, or definition of ‘Done’ that may help them improve.

NEW QUESTION 6

Which of the following is required by Scrum? (Choose all that apply.)

- A. Sprint Retrospective.
- B. Members must be stand up at the Daily Scrum.
- C. Sprint Burndown Chart.
- D. Release planning.
- E. All of the above.

Answer: AD

Explanation:

explanation of Correct Answer: According to the Scrum Guide¹, the only required events in Scrum are Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective. These events enable transparency, inspection, and adaptation. The other options are not mandatory in Scrum, although they may be useful in some contexts.

References: Scrum Guide

NEW QUESTION 7

Who is responsible for collaboration with stakeholders? (choose the best answer)

- A. The Business Analyst.
- B. The Scrum Team.
- C. The Team Manager.
- D. The Project Manager.
- E. The Developers.

Answer: B

NEW QUESTION 8

Which three questions might be answered by Development Team members at the Daily Scrum? (Choose three.)

- A. How is the Sprint proceeding?
- B. What did I do yesterday that helped the Development Team meet the Sprint Goal?
- C. Why were you late?
- D. What will I do today to help the Development Team meet the Sprint Goal?
- E. How many hours did I spend on the project yesterday?
- F. What will I be working on tomorrow?
- G. Do I see any impediment that prevents me or the Development Team from meeting the Sprint Goal?

Answer: BDG

Explanation:

According to the Scrum Guide¹, during each Daily Scrum, each Developer answers three questions:

- What did I do yesterday that helped meet our Sprint Goal?
- What will I do today to help meet our Sprint Goal?
- Do I see any impediment that prevents me or our Development Team from meeting our Sprint Goal? The Developers can select whatever structure and techniques they want, as long as their Daily Scrum focuses on progress toward achieving their Sprint Goal and producing a usable Increment. The other options are not relevant or appropriate for the Daily Scrum.

References: Scrum Guide

NEW QUESTION 9

When must a scrum Team release each increment? (choose the best answer)

- A. when the Scrum Team finishes their work
- B. Alter every Sprin
- C. without exception
- D. Whenever the product s tree of detects
- E. When it makes sense to release It.

Answer: D

Explanation:

According to the Scrum Guide, a Scrum Team must release each Increment when it makes sense to do so, based on the value and feedback obtained from stakeholders. The decision to release an Increment is made by the Product Owner, who is responsible for maximizing the value of the product and the work of the Development Team. The other options are not valid, as they imply that releasing an Increment is either mandatory (such as after every Sprint), conditional (such as when the product is free of defects), or irrelevant (such as when the Scrum Team finishes their work).

NEW QUESTION 10

What techniques could the Scrum Master use when the Scrum Team gets caught in an internal disagreement about which agile practices to apply? (Choose the best two answers.)

- A. Involve the complete Scrum Team in making a decision.
- B. Use coaching techniques; such as open QUESTION NO:s and active listening.
- C. Ask an external agile coach what they recommend.
- D. Ask team members to take the issue up with to the company's Human Resources department.

Answer: AB

Explanation:

Two techniques that the Scrum Master could use when the Scrum Team gets caught in an internal disagreement about which agile practices to apply are to involve the complete Scrum Team in making a decision, and to use coaching techniques such as open questions and active listening, as stated in [3]: "The Scrum Master should facilitate a constructive dialogue among the team members and help them reach a consensus on which agile practices to use. The Scrum Master should also use coaching techniques such as open questions and active listening to understand the underlying needs and motivations of each team member and to help them find common ground."

NEW QUESTION 10

When a Development Team is having trouble delivering a working Increment because they don't understand a functional requirement, what should they do?

- A. Add a specialist to the Development Team.
- B. Partially complete the functionality, and discuss the remaining work at the Sprint Review.
- C. Collaborate with the Product Owner to determine what is possible and acceptable.
- D. Defer the work to a more appropriate Sprint.

Answer: C

Explanation:

The correct answer is C, because when a Development Team is having trouble delivering a working Increment because they don't understand a functional requirement, they should collaborate with the Product Owner to determine what is possible and acceptable. The Scrum Guide states that "the Product Owner is responsible for maximizing the value of the product resulting from work of the Development Team. How this is done may vary widely across organizations, Scrum Teams, and individuals." Therefore, the Product Owner should clarify the functional requirement and negotiate the scope of work with the Development Team.

NEW QUESTION 14

Who should know the most about the progress toward a business objective or a release?

- A. The Project Manager.
- B. The Scrum Master.
- C. The Development Team.
- D. The Product Owner.

Answer: D

Explanation:

The Product Owner should know the most about the progress toward a business objective or a release, as stated in the Scrum Guide: "The Product Owner is responsible for maximizing the value of the product resulting from work of the Development Team. How this is done may vary widely across organizations, Scrum Teams, and individuals."

NEW QUESTION 19

What are three benefits of self-organization? (Choose three.)

- A. Increased creativity.
- B. Increased rule compliance.
- C. Increased accuracy of estimates.
- D. Increased self-accountability
- E. Increased commitment.

Answer: ADE

Explanation:

According to the Scrum Guide¹, self-organization is one of the essential characteristics of Scrum Teams.

Self-organizing teams choose how best to accomplish their work, rather than being directed by others outside the team. Self-organization enables teams to deliver faster and better results by harnessing their creativity and skills. Some benefits of self-organization are:

- Increased creativity, as team members have more freedom and autonomy to explore new ideas and solutions.
- Increased self-accountability, as team members take ownership and responsibility for their work and outcomes.
- Increased commitment, as team members are more engaged and motivated by having a say in how they work.

The other options are not benefits of self-organization, as they may imply external control or pressure. References: Scrum Guide

NEW QUESTION 24

During a Sprint Retrospective, for what is the Scrum Master responsible?

- A. Prioritizing the resulting action items.
- B. Participating as a Scrum team member and facilitating as requested or needed.
- C. Acting as a scribe to capture the Development Team's answers.
- D. Summarizing and reporting the discussions to management.

Answer: B

Explanation:

According to the Scrum Guide¹, the purpose of the Sprint Retrospective is to plan ways to increase quality and effectiveness. The Scrum Team inspects how the last Sprint went with regards to individuals, interactions, processes, tools, and their Definition of Done. Inspected elements often vary with domain, practices, and

people involved. The Scrum Team identifies the most helpful changes to improve its effectiveness. The most impactful improvements are addressed as soon as possible. They may even be added to the Sprint Backlog for the next Sprint. The Sprint Retrospective is an opportunity for the Scrum Team to inspect itself and create a plan for improvements to be enacted during the next Sprint. The Scrum Master is part of the Scrum Team and should participate as a Scrum team member and facilitate as requested or needed.

References: Scrum Guide

NEW QUESTION 29

user documentation is part of your Definition of Done. However, there are not enough technical writers for all teams. Your Scrum Team does not have a technical writer. What should the Scrum Team do?
(choose the best answer)

- A. The Developers on the Scrum Team should write the user documentation
- B. Wait until you have a technical writer on your Scrum Team to take care of this.
- C. Form a separate team of technical writers that will work on an on-demand basis for the various Product Owners
- D. Work order will be first in, first out.
- E. Let the user documentation remain undone and accumulate until after the last development Sprint
- F. It will then be done by any available technical writers.

Answer: A

Explanation:

According to the Scrum Guide, the Developers on the Scrum Team should write the user documentation, as they are responsible for creating a “Done” Increment that meets the Definition of Done and the Sprint Goal. The other options are not valid, as they imply that the user documentation can be deferred, ignored, or outsourced, which is not consistent with Scrum values and principles.

NEW QUESTION 31

Which two ways of creating Scrum Teams are consistent with Scrum's values? (choose the best two answers)

- A. Bring all the people together and let them organize into Scrum Teams
- B. Managers personally re-assign current subordinates to new teams.
- C. Existing teams propose how they would like to go about organizing into the new structure.
- D. Managers collaborate to assign individuals to specific teams.
- E. The Chief Product Owner determines the new team structures and assignments.

Answer: AC

Explanation:

The best two answers are A and C. These two ways of creating Scrum Teams are consistent with Scrum's values because they respect the self-organization and empowerment of the people who will be working in the teams. They also foster openness and courage by allowing the people to express their preferences and opinions about the new structure.

B, D and E are not consistent with Scrum's values because they impose a top-down approach that does not involve the people who will be affected by the change. They also undermine the commitment and focus of the teams by assigning them to work on something they may not be interested in or passionate about.

NEW QUESTION 34

You have just been hired by a company new to Scrum. Your management has assigned you to be the Scrum Master of six new Scrum Teams. These teams will build one product. Select two conditions you should strive for in this scenario.
(choose the best two answers)

- A. There should be six Product Owners, one for each Scrum Team.
- B. There should be six Product Owners, reporting to a Chief Product Owner.
- C. The product has one Product Backlog.
- D. Each Scrum Team should have a separate Product Backlog.
- E. There should be only one Product Owner.

Answer: CE

Explanation:

According to the Scrum Guide 20201, the product has one Product Backlog, which is the single source of work undertaken by the Scrum Team. The Product Backlog is ordered by the Product Owner, who is accountable for maximizing the value of the product resulting from the work of the Scrum Team. There should be only one Product Owner per product, who may represent the desires of a committee in the Product Backlog, but those wanting to change a Product Backlog item's priority must address the Product Owner1. Having multiple Product Owners or Product Backlogs would create confusion, inconsistency, and waste in the Scrum process.

NEW QUESTION 39

Currently, your Development Teams are organized to address a single layer only (for example, front end, middle tier, back end, and interfaces). What are three things to consider when deciding to move away from such component teams toward feature teams? (Choose three.)

- A. You cannot do Scrum without feature teams.
- B. Productivity may suffer when making this kind of move.
- C. Getting support from the business side first helps.
- D. Feature teams have less communication overhead.
- E. With feature teams, it is easier to calculate the productivity per team.

Answer: BCD

Explanation:

The correct answers are B, C, and D, because moving away from component teams toward feature teams may involve some challenges and trade-offs. Productivity may suffer when making this kind of move, as teams need to learn new skills, coordinate with other teams, and deal with legacy code. Getting support from the business side first helps, as they can provide the vision, value, and feedback for the features. Feature teams have less communication overhead, as they

can deliver end-to-end functionality without depending on other teams.

NEW QUESTION 40

What is the role of management in Scrum?

- A. To facilitate the Scrum Teams with insights and resources that help them improve.
- B. To monitor the Development Team's productivity.
- C. To identify and remove people that aren't working hard enough.
- D. To continually monitor staffing levels of the Development Team.

Answer: A

Explanation:

The correct answer is A, because the role of management in Scrum is to facilitate the Scrum Teams with insights and resources that help them improve. The Scrum Guide states that "the organization respects their self-organization by not telling them how they should do their work." Therefore, management should support the Scrum Teams by providing them with an environment that fosters collaboration, learning, and innovation.

NEW QUESTION 45

What factor should be considered when establishing the Sprint length? (choose the best answer)

- A. The organization has mandated similar length sprints.
- B. The need for the team to learn based on doing work and measuring results.
- C. The frequency at which team formation can be changed.
- D. The organization's release schedule.

Answer: B

Explanation:

The best answer is B. The need for the team to learn based on doing work and measuring results.

The Sprint length should be chosen based on the complexity and volatility of the product and the environment, as well as the team's capability and Definition of Done. The Sprint length should enable the team to deliver a usable Increment of value that meets the feedback needs of the stakeholders and the business. The Sprint length should also allow the team to inspect and adapt their work processes and practices based on the outcomes of the Sprint.

The other options are not valid reasons for choosing the Sprint length. The organization's mandate, team formation, and release schedule should not dictate the Sprint length, but rather be aligned with it. The Scrum Team should have the autonomy to choose the Sprint length that best suits their product and context.

You can learn more about how to choose the right Sprint length from these sources: How Long A Sprint Should Be?, How to Choose the Right Sprint Length in Scrum, What is a Sprint?, Determining the Sprint Length, and Sprint Length: What's the Right Length?.

NEW QUESTION 47

Which of the following services are appropriate for a Scrum Master in regard to the Daily Scrum?

- A. Lead the discussions of the Development Team.
- B. Make sure that all 3 questions have been answered by each member of the team.
- C. Keep track of whether each team member has a chance to speak.
- D. Teach the Development Team to keep the Daily Scrum within the 15 minute time-box.
- E. All of the above.

Answer: D

Explanation:

The correct answer is D, because one of the services that a Scrum Master can provide in regard to the Daily Scrum is to teach the Development Team to keep the Daily Scrum within the 15 minute time-box. The Scrum Guide states that "the Scrum Master ensures that the Development Team has the meeting, but the Development Team is responsible for conducting the Daily Scrum. The Scrum Master teaches the Development Team to keep the Daily Scrum within the 15-minute time-box."

NEW QUESTION 52

A new developer is having continuing conflicts with existing Development Team members and creating the hostile environment. If necessary, who is responsible for removing the team member?

- A. The hiring manager is responsible, because he/she hired the developer.
- B. The Scrum Manager is responsible, because he/she removes Impediments.
- C. The Development Team is responsible, and may need help from the Scrum Master.
- D. The Product Owner is responsible, because he/she controls the return on investment (ROI).

Answer: C

Explanation:

The correct answer is C, because if necessary, the Development Team is responsible for removing a team member who is creating a hostile environment. The Scrum Guide states that "development Teams are self-organizing. No one (not even the Scrum Master) tells the Development Team how to turn Product Backlog into Increments of potentially releasable functionality." Therefore, the Development Team should manage its own composition and dynamics, and may need help from the Scrum Master to facilitate this process.

NEW QUESTION 57

A Scrum Team has been working on a product for nine Sprints. A new Product Owner comes in, understanding he is accountable for the Product Backlog. However, he is unsure about his responsibilities. Which two activities are part of the Product Owner role according to Scrum? (Choose two.)

- A. Ensuring that the most valuable functionality is produced first, at all times.
- B. Interacting with stakeholders.

- C. Providing the Development Team with detailed specifications.
- D. Describing features as Use Cases.
- E. Creating detailed functional test cases.

Answer: AB

Explanation:

The Product Owner is responsible for ensuring that the most valuable functionality is produced first, at all times, by ordering and prioritizing the Product Backlog. The Product Owner also interacts with stakeholders to understand their needs and expectations, and to communicate the vision and progress of the product. The other options are not part of the Product Owner role according to Scrum, as they are either too prescriptive or too technical.

NEW QUESTION 62

Who creates the definition of “Done”?

- A. The Scrum Master as he/she is responsible for the Development Team’s productivity.
- B. The Scrum Team, in a collaborative effort where the result is the common denominator of all members’ definition.
- C. The Product Owner as he/she is responsible for the product’s success.
- D. The development organization (or Development Team if none is available from the development organization).

Answer: D

Explanation:

According to the Scrum Guide¹, the definition of “Done” is a formal description of the state of the Increment when it meets the quality measures required for the product. The definition of “Done” is created by the development organization (or Development Team if none is available from the development organization). The definition guides the Development Team in creating a “Done” Increment.

References: Scrum Guide

NEW QUESTION 66

Who has the final say on the order of the Product Backlog?

- A. The Development Team.
- B. The Product Owner.
- C. The Scrum Master.
- D. The Stakeholders.
- E. The CEO.

Answer: B

Explanation:

According to the Scrum Guide, the Product Owner has the final say on the order of the Product Backlog, as he or she is responsible for maximizing the value of the product and the work of the Development Team. The other roles do not have this authority, although they may provide input and suggestions to the Product Owner.

NEW QUESTION 70

True or False Developers do not meet with stakeholders: only the Product Owner meets with stakeholders

- A. True
- B. False

Answer: B

Explanation:

According to the Scrum Guide, Developers do meet with stakeholders, especially during the Sprint Review and Sprint Planning events. The Product Owner is the primary person who interacts with stakeholders, but Developers also need to communicate with them to understand their needs, expectations, and feedback. The Product Owner may also invite stakeholders to provide clarifications or inputs during the Sprint.

NEW QUESTION 75

Multiple Scrum Teams working on the same project must have the same Sprint start date.

- A. True
- B. False

Answer: B

Explanation:

The correct answer is B, because multiple Scrum Teams working on the same project do not have to have the same Sprint start date. The Scrum Guide states that “multiple Scrum Teams often work together on the same product. One product goal unites them. Therefore, they must mutually define and comply with a definition of ‘Done’ that applies to their combined work product.” Therefore, the synchronization of multiple Scrum Teams is based on their shared product goal and definition of ‘Done’, not on their Sprint start date.

NEW QUESTION 80

How much of the Sprint Backlog must be defined during the Sprint Planning event?

- A. Just enough tasks for the Scrum Master to be confident in the Development Team’s understanding of the Sprint.
- B. The entire Sprint Backlog must be identified and estimated by the end of the Sprint Planning meeting.
- C. Enough so the Development Team can create its best forecast of what it can do, and to start the first several days of the Sprint.
- D. Just enough to understand design and architectural implications.

Answer: C

Explanation:

The correct answer is C, because the Scrum Guide states that “the Development Team usually starts by designing the system and the work needed to convert the Product Backlog into a working product Increment. Work planned for the first days of the Sprint by the Development Team is decomposed by the end of this meeting, often to units of one day or less. The Development Team self-organizes to undertake the work in the Sprint Backlog, both during Sprint Planning and as needed throughout the Sprint.” Therefore, enough work should be defined during the Sprint Planning event so that the Development Team can create its best forecast of what it can do, and to start the first several days of the Sprint.

NEW QUESTION 84

Which are characteristics of the Daily Scrum? (choose the best two answers)

- A. Its location and time remain constant
- B. Its purpose is to inspect progress toward the Sprint Goal and adapt the Sprint Backlog.
- C. It is free form and designed to promote conversation
- D. It is facilitated by the team lead.
- E. It is held first thing in the morning.
- F. It consists of the Scrum Master asking the team for status.

Answer: AB

Explanation:

According to the Scrum Guide, two characteristics of the Daily Scrum are its location and time remain constant and its purpose is to inspect progress toward the Sprint Goal and adapt the Sprint Backlog. These characteristics promote consistency, transparency, and adaptation within the Development Team. The other options are not valid characteristics of the Daily Scrum, as they are either irrelevant (such as being held first thing in the morning) or inappropriate (such as being free form, facilitated by the team lead, or consisting of the Scrum Master asking for status).

NEW QUESTION 85

Multiple Scrum Teams working on the same product or system all select work from the same Product Backlog.

- A. True
- B. False

Answer: A

Explanation:

According to the Scrum Guide¹, when multiple Scrum Teams are working together on one product, they must coordinate their work with each other. One way to do this is through Nexus, a framework for scaling Scrum. Nexus helps to reduce cross-team dependencies and integration issues by making them more transparent. Multiple Scrum Teams working on one product use one Product Backlog.
References: Scrum Guide, Nexus Guide

NEW QUESTION 88

Who creates the Definition of Done? (choose the best answer)

- A. The Scrum Master
- B. The Product Owner
- C. The Scrum Team
- D. The Developers

Answer: C

Explanation:

The correct answer is C. The Scrum Team creates the Definition of Done. According to the Scrum Guide¹, “The Developers are required to conform to the Definition of Done, which is defined and evolves with the Scrum Team.” The Definition of Done is a commitment by the Developers for the Increment, but it is also a shared understanding within the whole Scrum Team, including the Product Owner and the Scrum Master². The Scrum Team collaborates to create and update the Definition of Done as needed, based on the product and organizational standards³. The Definition of Done is not imposed by any external authority or individual.

NEW QUESTION 93

Who is accountable for clearly expressing Product Backlog items? (Choose the best answer.)

- A. The business analyst who represents the Product Owner.
- B. The Product Owner.
- C. The Scrum Master, or the Scrum Master may have the Developers do it.
- D. The Scrum Master.

Answer: B

Explanation:

According to the Scrum Guide, the Product Owner is accountable for clearly expressing Product Backlog items, as he or she is responsible for managing and prioritizing the Product Backlog. The other options are not valid, as they imply that the Product Owner can be replaced by a business analyst, or that the Scrum Master or the Developers can express the Product Backlog items.

NEW QUESTION 96

At the seventh Sprint Review, the stakeholders are disappointed and angry. They have determined that the product or system being built will not meet their needs and will cost more than they are willing to spend. What factors likely led to this? (Choose two.)

- A. The Project Management Office (PMO) has not been engaged adequately.
- B. The Product Owner has not been keeping the stakeholders aware of the progress of the project.
- C. The stakeholders haven't been using the Sprint Reviews to inspect and evaluate progress.
- D. The stakeholders were not allowed to enter the development area.

Answer: BC

Explanation:

According to the Scrum Guide, the Sprint Review is a time for the Scrum Team and the stakeholders to inspect the product Increment and adapt the Product Backlog if needed. The Product Owner is responsible for keeping the stakeholders aware of the progress of the project and inviting them to the Sprint Review. If the Product Owner has not been doing this, or if the stakeholders have not been using the Sprint Review to inspect and evaluate progress, then they may be disappointed and angry at the seventh Sprint Review. The other options are not likely factors that led to this situation, as they are either irrelevant (such as the PMO or the development area) or incorrect (such as delaying the release).

NEW QUESTION 100

What are two ways that architecture and infrastructure are handled in Scrum? (Choose two.)

- A. They are discussed, determined, and documented before the actual feature development Sprints.
- B. They are implemented along with functional development of the product.
- C. They are added to the Product Backlog and addressed in early Sprints, while always requiring at least some business functionality, no matter how small.
- D. They are built by a separate team through the creation of an architectural runway.

Answer: BC

Explanation:

Architecture and infrastructure are handled in Scrum by implementing them along with functional development of the product, and by adding them to the Product Backlog and addressing them in early Sprints, while always requiring at least some business functionality, no matter how small, as stated in [2]: "Scrum does not distinguish between developing functionality or architecture. They are developed together, as they are both important and support each other. Architecture is not a separate phase; it is part of the product development. Architecture is added to the Product Backlog as any other feature or functionality."

NEW QUESTION 104

Who has the final decision about the order of items in the Product Backlog? (Choose the best answer.)

- A. The Stakeholders.
- B. The Product Owner.
- C. The Scrum Team.
- D. The Scrum Master.
- E. The Developers.

Answer: B

Explanation:

According to the Scrum Guide, the Product Owner has the final decision about the order of items in the Product Backlog, as he or she is responsible for maximizing the value of the product and the work of the Development Team. The other roles do not have this authority, although they may provide input and suggestions to the Product Owner.

NEW QUESTION 106

Which statement best describes the Sprint Review?

- A. It is used to congratulate the Development Team if it did what it forecast, or to punish the Development Team if it failed to meet its forecast.
- B. It is a demo at the end of the Sprint for everyone in the organization to check on the work done.
- C. It is a mechanism to control the Development Team's activities during a Sprint.
- D. It is when the Scrum Team and stakeholders inspect the outcome of a Sprint and figure out what to do next.

Answer: D

Explanation:

The correct answer is D, because this statement best describes the Sprint Review. The Scrum Guide states that "a Sprint Review is held at the end of the Sprint to inspect the Increment and adapt the Product Backlog if needed. During the Sprint Review, the Scrum Team and stakeholders collaborate about what was done in the Sprint." Therefore, the Sprint Review is when the Scrum Team and stakeholders inspect the outcome of a Sprint and figure out what to do next.

NEW QUESTION 109

What is the recommended size for a Scrum Team? (Choose the best answer.)

- A. At least 7.
- B. 9
- C. 10 or fewer.
- D. 7 plus or minus 3.

Answer: C

Explanation:

The recommended size for a Scrum Team is 10 or fewer people, as stated in the Scrum Guide: "The recommended size of a Scrum Team is small enough to remain nimble and large enough to complete significant work within a Sprint, typically 10 or fewer people."

NEW QUESTION 113

A Product Owner wants advice from the Scrum Master about estimating work in Scrum. Which of these is the guideline that a Scrum Master should give? (Choose

the best answer.)

- A. Product Backlog items must be estimated in story points.
- B. Estimates are made by the people doing the work.
- C. Estimates must be in relative units.
- D. Scrum forbids estimating.
- E. Estimates are made by the Product Owner, but are best checked with the Development Team.

Answer: B

Explanation:

According to the Scrum Guide, estimates are made by the people doing the work, which is the Development Team. The Development Team is responsible for all estimates in the Product Backlog and the Sprint Backlog. The other options are not valid guidelines for estimating work in Scrum, as they are either too prescriptive (such as requiring story points or relative units), incorrect (such as forbidding estimating or having the Product Owner make estimates), or unnecessary (such as checking estimates with the Development Team).

NEW QUESTION 117

A Scrum Master is working with a Development Team that has members in different physical locations. The Development Team meets in a variety of meeting rooms and has much to do logistically (for example, set up conference calls) before the Daily Scrum. What action should the Scrum Master take?

- A. Allow the Development Team to self-manage and determine for itself what to do.
- B. Set up the meeting and tell the Development Team that is how it will be done.
- C. Ask the Development Team members to alternate who is responsible for meeting setup.
- D. Inform management and ask them to solve it.

Answer: A

Explanation:

According to the Scrum Guide¹, only people who are actively working on items in the Sprint Backlog participate in updating it during a Sprint; this includes tracking progress made on those items. This is typically done by Developers updating their remaining work every day after their Daily Scrum. The Development Team tracks this total work remaining at least for every Daily Scrum to project the likelihood of achieving their Sprint Goal. The Developers are self-organizing and decide how to turn Product Backlog items into an Increment of value. Therefore, the Scrum Master should allow the Development Team to self-manage and determine for itself what to do regarding the logistical challenges of meeting in different locations.

NEW QUESTION 119

Which outcome is expected as Scrum Teams mature?

- A. They will improve their definition of “Done” to include more stringent criteria.
- B. The Sprint Retrospectives will grow to be longer than 4 hours.
- C. There is no need for a time-boxed Sprint, since time-boxes are only for new Scrum Teams.
- D. Sprint Reviews will no longer be needed.
- E. A Scrum Master is no longer needed since they are a mature team now.

Answer: A

Explanation:

According to the Scrum Guide¹, the definition of “Done” is a formal description of the state of the Increment when it meets the quality measures required for the product. The definition guides the Development Team in creating a “Done” Increment. The definition of “Done” is created by the development organization (or Development Team if none is available from the development organization). The definition of “Done” may vary significantly per Scrum Team, depending on the context. One aspect of Scrum Teams inspecting how they work toward their Product Goal is that they improve their definition of “Done” over time.

References: Scrum Guide

NEW QUESTION 123

What are the two primary ways a Scrum Master keeps a Development Team working at its highest level of productivity? (Choose two.)

- A. By ensuring the meetings start and end at the proper time.
- B. By removing impediments that hinder the Development Team.
- C. By facilitating Development Team decisions.
- D. By keeping high value features high in the Product Backlog.

Answer: BC

Explanation:

The correct answers are B and C, because these are the two primary ways a Scrum Master keeps a Development Team working at its highest level of productivity. The Scrum Guide states that “the Scrum Master serves the Development Team in several ways, including ... removing impediments to the Development Team’s progress; facilitating Scrum events as requested or needed; and coaching the Development Team in self-organization and cross-functionality.” Therefore, by removing impediments and facilitating decisions, the Scrum Master helps the Development Team focus on their work and deliver value.

NEW QUESTION 127

Which answer best describes the topics covered in Sprint Planning?

- A. What to do and who will do it.
- B. How conditions have changed and how the Product Backlog should evolve.
- C. What can be done and how to do it.
- D. What went wrong in the last Sprint and what to do differently this Sprint.
- E. Who is on the team and what team member roles will be.

Answer: C

NEW QUESTION 132

Which two things should the Scrum Team do during the first Sprint?
(choose the best two answers)

- A. Define the major product features and a release plan architecture.
- B. Build at least one piece of valuable functionality.
- C. Create at least one valuable, useful Increment
- D. Make up a plan for the rest of the project
- E. Analyze, describe, and document the requirements for the subsequent Sprints.

Answer: BC

Explanation:

According to the Scrum Guide, two things that the Scrum Team should do during the first Sprint are building at least one piece of valuable functionality and creating at least one valuable, useful Increment. These are the goals of every Sprint, regardless of its order. The other options are not things that the Scrum Team should do during the first Sprint, as they are either out of scope (such as defining major product features and a release plan architecture or making a plan for the rest of the project) or unnecessary (such as analyzing, describing, and documenting requirements for subsequent Sprints).

NEW QUESTION 134

A Development Team selects a set of Product Backlog items for a Sprint Backlog with the intent to get the selected items “Done” by the end of the Sprint. Which three phrases best describe the purpose of a definition of “Done”? (Choose three.)

- A. It controls whether the developers have performed their tasks.
- B. It provides a template for elements that need to be included in the technical documentation.
- C. It creates transparency over the work inspected at the Sprint Review.
- D. It tracks the percent completeness of a Product Backlog item.
- E. It guides the Development Team in creating a forecast at the Sprint Planning.
- F. It defines what it takes for an Increment to be ready for release.

Answer: CEF

Explanation:

The correct answers are C, E, and F, because these phrases best describe the purpose of a definition of “Done”. It creates transparency over the work inspected at the Sprint Review, as it defines what it means for an Increment to be potentially releasable. It guides the Development Team in creating a forecast at the Sprint Planning, as it helps them estimate how much work they can accomplish in a Sprint. It defines what it takes for an Increment to be ready for release, as it ensures that the product meets the quality expectations of the stakeholders.

NEW QUESTION 135

As the Development Team starts work during the Sprint, it realizes it has selected too much work to finish in the Sprint. What should it do?

- A. Inform the Product Owner at the Sprint Review, but prior to the demonstration.
- B. Find another Scrum Team to give the excess work to.
- C. As soon as possible in the Sprint, work with the Product Owner to remove some work or Product Backlog items.
- D. Reduce the definition of “Done” and get all of the Product Backlog items “Done” by the new definition.

Answer: C

Explanation:

The correct answer is C, because as soon as possible in the Sprint, the Development Team should work with the Product Owner to remove some work or Product Backlog items if they realize they have selected too much work to finish in the Sprint. The Scrum Guide states that “the Development Team may renegotiate the selected Product Backlog items with the Product Owner. If the Development Team realizes it has too much or too little work, it may renegotiate the selected Product Backlog items with the Product Owner. The Development Team may also invite other people to attend to provide technical or domain advice.”

NEW QUESTION 137

True or False A scrum Master fulfills the same role as a traditional Project Manager

- A. True
- B. False

Answer: B

Explanation:

According to the Scrum Guide, a Scrum Master fulfills a different role from a traditional project manager. A Scrum Master is a servant-leader and a coach for the Scrum Team and the organization, not a manager or a supervisor. A Scrum Master does not assign tasks, set deadlines, or monitor progress, but rather facilitates self-organization, collaboration, and empiricism within the Scrum Team and the organization.

NEW QUESTION 140

When is a Product Backlog item considered complete? (choose the best answer)

- A. When the item passes all acceptance criteria
- B. When the item has gained product sponsor approval
- C. At the end of the Sprint
- D. When the item meets the Definition of Done

Answer: D

Explanation:

A Product Backlog item is considered complete when it meets the Definition of Done, as stated in [5]: “When a Product Backlog item or an Increment is described as “Done”, everyone must understand what “Done” means. Although this varies significantly per Scrum Team, members must have a shared understanding of what it means for work to be complete, to ensure transparency. This is the definition of “Done” for the Scrum Team and is used to assess when work is complete on the product Increment.”

NEW QUESTION 144

What does it mean for a Scrum Team to be cross-functional? (choose the best answer)

- A. The Scrum Team includes not only developers but also business analysts, architects, and testers.
- B. The Scrum Team includes skilled individuals who together have all the skills necessary to create value each Sprint.
- C. Developers on the Scrum Team work closely with business analysts, architects, developers, and testers who are not on the team.
- D. The Scrum Team is a virtual team drawing from separate teams of business analysts, architects, developers, and testers.

Answer: B

Explanation:

The correct answer is B. The Scrum Team includes skilled individuals who together have all the skills necessary to create value each Sprint. According to the Scrum Guide¹, “Scrum Teams are cross-functional, meaning the members have all the skills necessary to create value in each Sprint.” This does not mean that every individual has all the skills, but rather that the team as a whole does. Cross-functionality enables the Scrum Team to deliver a potentially releasable Increment of “Done” product at the end of each Sprint, without depending on others outside the team.

NEW QUESTION 148

In the Sprint Planning meeting, the Product Owner and the Development Team were unable to reach a clear understanding about the highest order Product Backlog items. Because of this, the Development Team couldn’t figure out how many Product Backlog items it could forecast for the upcoming Sprint. They were able to agree on a Sprint Goal, however.

Which of the following two actions should the Scrum Master support? (Choose two.)

- A. Cancel the Sprint
- B. Send the entire team to an advanced Scrum training and then start a new Sprint.
- C. Forecast the most likely Product Backlog items to meet the goal and create a Sprint Backlog based on a likely initial design and plan
- D. Once the time-box for the Sprint Planning meeting is over, start the Sprint and continue to analyze, decompose, and create additional functionality during the Sprint.
- E. Continue the Sprint Planning meeting past its time-box until an adequate number of Product Backlog items are well enough understood for the Development Team to make a complete forecast
- F. Then start the Sprint.
- G. Discuss in the upcoming Sprint Retrospective why this happened and what changes will make it less likely to recur.
- H. Ask everyone to take as much time as needed to analyze the Product Backlog first, and then reconvene another Sprint Planning meeting.

Answer: BD

Explanation:

According to the Scrum Guide¹, the Sprint Planning meeting has a time-box of eight hours or less for a one-month Sprint. The Scrum Master ensures that the meeting is time-boxed and keeps the Scrum Team focused on the objective. If the Development Team cannot forecast how many Product Backlog items it can complete, it should still start the Sprint and work on the most likely items to meet the Sprint Goal. The Sprint Backlog can be updated throughout the Sprint as more is learned. The Scrum Master should also support the team to discuss the reasons for the lack of clarity in the Product Backlog items and how to prevent it from happening again in the next Sprint Retrospective.

References: Scrum Guide

NEW QUESTION 152

When must the Product Owner participate in the Daily Scrum? (choose the best answer)

- A. When the Product Owner is actively working on items on the Sprint Backlog; however, they participate as a Developer
- B. When the Product Owner needs to represent the stakeholders point of view to the Developers
- C. When there are impediments to discuss
- D. When the Scrum Master asks the Product Owner to attend

Answer: A

Explanation:

According to the Scrum Guide, the Product Owner must participate in the Daily Scrum when he or she is actively working on items on the Sprint Backlog; however, they participate as a Developer, not as an authority figure. This means that the Product Owner can share progress, plans, and impediments with the other Developers and collaborate with them on delivering value. The other options are not valid reasons for the Product Owner to participate in the Daily Scrum, as they are either irrelevant (such as representing stakeholders or discussing impediments) or inappropriate (such as being asked by the Scrum Master).

NEW QUESTION 156

Who is responsible for clearly expressing Product Backlog items?

- A. The Scrum Master, or the Scrum Master may have the Development Team do it.
- B. The Scrum Master.
- C. The Product Owner.
- D. The business analyst who represents the Product Owner in the Development Team.

Answer: C

Explanation:

According to the Scrum Guide¹, the Product Backlog is an ordered list of everything that is known to be needed in the product. It is the single source of requirements for any changes to be made to the product. The Product Owner is accountable for maximizing value resulting from work by Developers. The Product Owner is also accountable for effective Product Backlog management, which includes:

- Developing and explicitly communicating the Product Goal;
- Creating and clearly communicating Product Backlog items;
- Ordering Product Backlog items; and
- Ensuring that the Product Backlog is transparent, visible and understood.

Therefore, the Product Owner is responsible for clearly expressing Product Backlog items. References: Scrum Guide

NEW QUESTION 158

The time-box for a Daily Scrum?

- A. Two minutes per person.
- B. 15 minutes.
- C. 15 minutes for a 4 week sprint
- D. For shorter Sprints it is usually shorter.
- E. 4 hours.
- F. The same time of day every day.

Answer: B

Explanation:

The correct answer is B, because the time-box for a Daily Scrum is 15 minutes. The Scrum Guide states that “the Daily Scrum is a 15-minute time-boxed event for the Development Team to synchronize activities and create a plan for the next 24 hours.”

NEW QUESTION 160

Which are appropriate topics for discussion in a Sprint Retrospective? (Choose the best three answers.)

- A. Arranging the Sprint Backlog for the next Sprint.
- B. The value of work currently represented in the Product Backlog.
- C. Team relations
- D. Definition of Done.
- E. How the Scrum Team does its work.

Answer: CDE

Explanation:

According to the Scrum Guide, the Sprint Retrospective is an opportunity for the Scrum Team to inspect itself and create a plan for improvements to be enacted during the next Sprint. The topics that are appropriate for discussion are those that relate to how the team does its work, such as team relations, Definition of Done, and processes, tools, communication, collaboration, quality, etc. The other options are not appropriate topics for discussion in a Sprint Retrospective, as they belong to other Scrum events (such as arranging the Sprint Backlog for the next Sprint in the Sprint Planning or evaluating the value of work in the Product Backlog in the Sprint Review).

NEW QUESTION 161

Which phrase best describes a Product Owner?

- A. Go-between development team and customers.
- B. Value optimizer.
- C. Requirements engineer.
- D. Team manager.

Answer: B

Explanation:

The correct answer is B, because a Product Owner is best described as a value optimizer. The Scrum Guide states that “the Product Owner is responsible for maximizing the value of the product resulting from work of the Development Team.” Therefore, a Product Owner should focus on delivering value to the customers and stakeholders through the product.

NEW QUESTION 163

True or False: An increment must be released to customers or users at the end of each sprint.

- A. True
- B. False

Answer: B

Explanation:

According to the Scrum Guide, an Increment does not have to be released to customers or users at the end of each Sprint. However, it must be in a usable condition and meet the Definition of Done. The decision to release an Increment is made by the Product Owner, based on the value and feedback obtained from stakeholders. The other option is not valid, as it implies that releasing an Increment is mandatory at the end of each Sprint.

NEW QUESTION 164

Why should the Product Owner be present at the Daily Scrum?

- A. He/She doesn't need to be there.
- B. To hear about impediments in functionality.
- C. To represent the stakeholders' point of view.
- D. To participate as a Scrum Team member.

Answer: A

Explanation:

The correct answer is A, because the Product Owner does not need to be present at the Daily Scrum. The Scrum Guide states that “the Daily Scrum is a 15-minute time-boxed event for the Development Team to synchronize activities and create a plan for the next 24 hours. ... The structure of the meeting is set by the Development Team and can be conducted in different ways if it focuses on progress toward the Sprint Goal.” Therefore, the Daily Scrum is an internal event for the Development Team, and the Product Owner can attend only if invited by the Development Team.

NEW QUESTION 169

Who owns the Sprint Backlog?

- A. The Scrum Team.
- B. The Product Owner.
- C. The Scrum Master.
- D. The Development Team.

Answer: D

Explanation:

Sprint Backlog is owned by the Development Team. The Scrum Guide states that “the Sprint Backlog is the set of Product Backlog items selected for the Sprint, plus a plan for delivering the product Increment and realizing the Sprint Goal. ... The Development Team modifies the Sprint Backlog throughout the Sprint, and the Sprint Backlog emerges during the Sprint. This emergence occurs as the Development Team works through the plan and learns more about the work needed to achieve the Sprint Goal.”

NEW QUESTION 170

What is the time-box for the Sprint Review?

- A. As long as needed.
- B. 2 hours for a monthly Sprint.
- C. 4 hours for a monthly Sprint.
- D. 4 hours and longer as needed.
- E. 1 day

Answer: C

Explanation:

According to the Scrum Guide¹, each event in Scrum is a formal opportunity to inspect and adapt something. These events are specifically designed to enable critical transparency and inspection. Failure to include any of these events results in reduced transparency and is a lost opportunity to inspect and adapt. All events are time-boxed events, such that every event has a maximum duration. Once a Sprint begins, its duration is fixed and cannot be shortened or lengthened. The remaining events may end whenever the purpose of the event is achieved, ensuring an appropriate amount of time is spent without allowing waste in the process. The time-box for the Sprint Review is four hours for a one-month Sprint.

References: Scrum Guide

NEW QUESTION 173

A properly functioning Scrum Team will have at least one Release Sprint and may well have several.

- A. True
- B. False

Answer: B

Explanation:

According to the Scrum Guide¹, there is no such thing as a Release Sprint in Scrum. A Release Sprint implies that there are other Sprints that don't produce a potentially releasable Increment, which violates the core principle of Scrum. Every Sprint should result in a “Done”, useable, and potentially releasable product Increment.

NEW QUESTION 174

What is the typical size for a Scrum Team? (choose the best answer)

- A. 7 plus or minus 3.
- B. At least 7.
- C. 9
- D. 10 or fewer.

Answer: D

Explanation:

The correct answer is D. 10 or fewer. According to the Scrum Guide 2020¹, “The Scrum Team is small enough to remain nimble and large enough to complete significant work within a Sprint, typically 10 or fewer people.” The other options are outdated or incorrect. Option A was based on the previous version of the Scrum Guide, which suggested a range of 3 to 9 developers². Option B is too vague and does not account for the upper limit of team size. Option C is too specific and does not allow for flexibility.

NEW QUESTION 179

Who is accountable for managing the progress of work during a Sprint? (choose the best answer)

- A. The Product Owner.
- B. The Developers.

- C. The Scrum Master.
- D. The most junior member of the team.

Answer: B

Explanation:

According to the Scrum Guide, the Developers are accountable for managing the progress of work during a Sprint, as they are responsible for creating a valuable Increment that meets the Definition of Done and the Sprint Goal. The other options are not valid, as they imply that the Product Owner, the Scrum Master, or the most junior member of the team are accountable for managing the progress of work, which is not consistent with Scrum.

NEW QUESTION 180

Which three of the following are true about Scrum? (Choose the best three answers.)

- A. Scrum implements self-management by replacing Project Managers with Scrum Masters.
- B. Each component of Scrum serves a specific purpose and is essential to Scrum's success and your usage of Scrum to develop complex products.
- C. Scrum is a methodology where you can pick and choose which parts of Scrum you think will work for your environment.
- D. Scrum is a framework for developing and sustaining complex products.
- E. Scrum is based on empiricism and lean thinking.

Answer: BDE

Explanation:

Three statements that are true about Scrum are:

- Each component of Scrum serves a specific purpose and is essential to Scrum's success and your usage of Scrum to develop complex products.
- Scrum is a framework for developing and sustaining complex products.
- Scrum is based on empiricism and lean thinking.

These statements are supported by [6]: "Scrum is not a process, technique, or definitive method. Rather, it is a framework within which you can employ various processes and techniques. ... Each component within the framework serves a specific purpose and is essential to Scrum's success and usage. ... The rules of Scrum bind together events, roles, artifacts, and rules governing their relationships. ... The three pillars uphold every implementation of empirical process control: transparency, inspection, and adaptation."

NEW QUESTION 183

Who determines how many Product Backlog items the Developers select for a sprint? (choose the best answer)

- A. The Scrum Master
- B. The Scrum Team
- C. The Developers
- D. The stakeholders attending Sprint Planning
- E. The Product Owner

Answer: C

Explanation:

The Developers determine how many Product Backlog items they select for a Sprint, as stated in the Scrum Guide: "The Developers select items from the Product Backlog to include in the current Sprint. The Scrum Team may refine these items during this process, which increases understanding and confidence."

NEW QUESTION 185

Who is accountable for tracking the remaining work toward the Sprint Goal? (Choose the best answer.)

- A. The Developers.
- B. The Scrum Master.
- C. The Product Owner.
- D. The Project Manager.

Answer: A

Explanation:

According to the Scrum Guide, the Developers are accountable for tracking the remaining work toward the Sprint Goal, as they are responsible for creating a valuable Increment that meets the Definition of Done and the Sprint Goal. The other options are not valid, as they imply that someone else outside the Development Team (such as the Scrum Master, the Product Owner, or the Project Manager) is accountable for tracking the remaining work, which is not consistent with Scrum values and principles.

NEW QUESTION 190

What are two responsibilities of testers in a Development Team? (Choose two.)

- A. Verifying the work of programmers.
- B. Everyone in the Development Team is responsible for quality.
- C. Tracking quality metrics.
- D. Finding bugs.
- E. Scrum has no "tester" role.

Answer: BE

Explanation:

The correct answers are B and E, because Scrum has no "tester" role and everyone in the Development Team is responsible for quality. The Scrum Guide states that "the Development Team consists of professionals who do the work of delivering a potentially releasable Increment of 'Done' product at the end of each Sprint.

Development Teams are structured and empowered by the organization to organize and manage their own work. The resulting synergy optimizes the

Development Team's overall efficiency and effectiveness.”

NEW QUESTION 195

Which statement best describes Scrum?

- A. A defined and predictive process that confirms to the principles of Scientific Management.
- B. A complete methodology that defines how to develop software.
- C. A cookbook that defines best practices for software development.
- D. A framework within which complex products in complex environments are developed.

Answer: D

Explanation:

Scrum is not a process, technique, or definitive method. Rather, it is a framework within which you can employ various processes and techniques. Scrum makes clear the relative efficacy of your product management and work techniques so that you can continuously improve the product, the team, and the working environment.

NEW QUESTION 199

Who must attend the Daily Scrum?

- A. The Scrum Master and Product Owner.
- B. The Development Team.
- C. The Development Team and Product Owner.
- D. The Scrum Team.
- E. The Development Team and Scrum Master.

Answer: D

Explanation:

According to the Scrum Guide¹, the Daily Scrum is an event for the Developers of the Scrum Team. The purpose of the Daily Scrum is to inspect progress toward the Sprint Goal and adapt the Sprint Backlog as necessary, adjusting the upcoming planned work. The Scrum Master and Product Owner may attend as observers, but only if it is useful for the Developers.

References: Scrum Guide

NEW QUESTION 200

A Sprint Retrospective should be held:

- A. At the end of each Sprint.
- B. At the beginning of each Sprint.
- C. Only when the Scrum Team determines it needs one.
- D. At the end of the last Sprint in a project or a release.

Answer: A

Explanation:

The correct answer is A, because a Sprint Retrospective should be held at the end of each Sprint. The Scrum Guide states that “the Sprint Retrospective is an opportunity for the Scrum Team to inspect itself and create a plan for improvements to be enacted during the next Sprint. ... The Sprint Retrospective occurs after the Sprint Review and prior to the next Sprint Planning.”

NEW QUESTION 205

How much time is required after a Sprint to prepare for the next Sprint?

- A. The break between Sprints is time-boxed to 1 week for 30 day Sprints, and usually less for shorter sprints.
- B. Enough time for the requirements for the next Sprint to be determined and documented.
- C. Enough time for the Development team to finish the testing from the last Sprint.
- D. Non
- E. A new Sprint starts immediately following the end of the previous Sprint.
- F. All of the above are allowed depending on the situation.

Answer: D

Explanation:

The correct answer is D, because there is no gap between Sprints in Scrum. The Scrum Guide states that “a new Sprint starts immediately after the conclusion of the previous Sprint.” Therefore, there is no time required after a Sprint to prepare for the next Sprint.

NEW QUESTION 210

For the purpose of transparency, when does Scrum say a new increment of working software must be available?

- A. After the acceptance testing phase.
- B. Before the release Sprint.
- C. Every 3 Sprints.
- D. At the end of every Sprint.
- E. When the Product Owner asks to create one.

Answer: D

Explanation:

According to the Scrum Guide¹, an Increment is a concrete stepping stone toward the Product Goal. Each Increment is additive to all prior Increments and thoroughly verified, ensuring that all Increments work together. In order to provide value, an Increment must be usable. Multiple Increments may be created within a Sprint. The sum of the Increments is presented at the Sprint Review thus supporting empiricism. However, an Increment may be delivered to stakeholders prior to the end of the Sprint. The Sprint Review should never be considered a gate to releasing value. For the purpose of transparency, when does Scrum say a new increment of working software must be available? At the end of every Sprint.

References: Scrum Guide

NEW QUESTION 211

What are two good ways for a Scrum Team to ensure security concerns are satisfied? (Choose two.)

- A. Postpone the work until a specialist can perform a security audit and create a list of security-related Product Backlog items.
- B. Add security concerns to the definition of “Done”.
- C. Add a Sprint to specifically resolve all security concerns.
- D. Delegate the work to the concerned department.
- E. Have the Scrum Team create Product Backlog items for each concern.

Answer: BE

Explanation:

According to the Scrum Guide¹, the definition of “Done” is a formal description of the state of the Increment when it meets the quality measures required for the product. The definition guides the Development Team in creating a “Done” Increment. The definition of “Done” is created by the development organization (or Development Team if none is available from the development organization). The definition of “Done” may vary significantly per Scrum Team, depending on the context. One aspect of Scrum Teams inspecting how they work toward their Product Goal is that they improve their definition of “Done” over time. Therefore, one good way for a Scrum Team to ensure security concerns are satisfied is to add security concerns to the definition of “Done”. Another good way is to have the Scrum Team create Product Backlog items for each concern, as they are responsible for managing and refining the Product Backlog.

References: Scrum Guide

NEW QUESTION 215

Who creates a Product Backlog Item’s estimate?

- A. The Development Team after clarifying requirements with the Product Owner.
- B. The Product Owner with input from the Development Team.
- C. The most senior people in the organization, including architects and subject matter experts.
- D. The Scrum Master.
- E. The Development Team, alone.

Answer: A

Explanation:

According to the Scrum Guide¹, Product Backlog refinement is an ongoing activity in which Product Backlog items are reviewed and revised. The Developers who will be doing the work are responsible for sizing or estimating it. The Product Owner may influence them by helping them understand and select trade-offs.

NEW QUESTION 216

The CEO asks the Development Team to add a “very important” item to a Sprint that is in progress. What should the Development Team do?

- A. Add the item to the current Sprint and drop an item of equal size.
- B. Add the item to the current Sprint without any adjustments.
- C. Inform the Product Owner so he/she can work with the CEO.
- D. Add the item to the next Sprint.

Answer: C

Explanation:

The correct answer is C, because the Development Team should inform the Product Owner so he/she can work with the CEO. The Scrum Guide states that “only the Product Owner has the authority to cancel the Sprint, although he or she may do so under influence from the stakeholders, the Development Team, or the Scrum Master.” Therefore, if the CEO wants to add a “very important” item to a Sprint that is in progress, he or she should communicate with the Product Owner, who can then decide whether to cancel or continue the current Sprint.

NEW QUESTION 219

A Scrum Master is introducing Scrum to a new Team. The Team has decided that a Sprint Retrospective is unnecessary. What action should the Scrum Master take?

(choose the best answer)

- A. Comply with the decision of the self-managing team.
- B. Begin facilitating productive and useful Sprint Retrospectives.
- C. Call a meeting between the ScrumTeam and senior management
- D. Consult with the Product Owner to see how they feel about the situation.

Answer: B

Explanation:

According to the Scrum Guide, the action that the Scrum Master should take when the Team decides that a Sprint Retrospective is unnecessary is to begin facilitating productive and useful Sprint Retrospectives. The Sprint Retrospective is an essential event for the Scrum Team to inspect itself and create a plan for improvements to be enacted during the next Sprint. The Scrum Master is responsible for ensuring that this event takes place and that positive outcomes are achieved. The other options are not valid actions, as they either imply that the Scrum Master complies with or ignores the decision of the Team (such as complying with it, calling a meeting with senior management, or consulting with the Product Owner), which is not consistent with Scrum values and principles.

NEW QUESTION 223

If two Scrum Teams are added to the development of a product that previously had only one Scrum Team, what will be the immediate impact on the productivity of the original Scrum Team?

- A. Its productivity is likely to decrease.
- B. Its productivity is likely to stay the same.
- C. Its productivity is likely to increase.

Answer: A

Explanation:

The correct answer is A, because if two Scrum Teams are added to the development of a product that previously had only one Scrum Team, the immediate impact on the productivity of the original Scrum Team is likely to decrease. This is because adding more teams may introduce some challenges and trade-offs, such as increased communication and coordination overhead, reduced alignment and cohesion, and potential conflicts or dependencies.

NEW QUESTION 224

Who determines how work is performed during the Sprint?

- A. Architects.
- B. The Development Team.
- C. The Scrum Master.
- D. Subject matter experts.
- E. Development Team managers.

Answer: B

Explanation:

The correct answer is B, because the Development Team determines how work is performed during the Sprint. The Scrum Guide states that “development Teams are self-organizing. No one (not even the Scrum Master) tells the Development Team how to turn Product Backlog into Increments of potentially releasable functionality.” Therefore, the Development Team has the autonomy and responsibility to organize and manage its own work.

NEW QUESTION 227

What is included in the Sprint Backlog?

- A. User Stories.
- B. Tasks.
- C. Use Cases.
- D. Tests.
- E. Any of the above (or others) which are a decomposition of the selected Product Backlog items.

Answer: E

Explanation:

The correct answer is E, because any of the above (or others) which are a decomposition of the selected Product Backlog items can be included in the Sprint Backlog. The Scrum Guide states that “the Sprint Backlog is the set of Product Backlog items selected for the Sprint, plus a plan for delivering the product Increment and realizing the Sprint Goal.” Therefore, any work items that help the Development Team achieve the Sprint Goal can be part of the Sprint Backlog.

NEW QUESTION 228

Which topics should be discussed in the Sprint Review? (Choose the best answer.)

- A. The Scrum process, and how it was used during the Sprint.
- B. Coding and engineering practices.
- C. The product Increment.
- D. All of the above.

Answer: C

NEW QUESTION 230

Every Scrum team must have a Product Owner and Scrum Master.

- A. Tru
- B. Outcomes affected by their participation and availability.
- C. Fals
- D. A Product Owner can be replaced by a business analyst in the Development Team.
- E. Fals
- F. A Scrum Master is only required when asked for by the Development Team.
- G. Tru
- H. Each must be 100% dedicated to the Scrum Team.

Answer: A

Explanation:

According to the Scrum Guide¹, there are three roles in a Scrum Team:

- The Product Owner
- The Developers
- The Scrum Master

The Product Owner is accountable for maximizing value resulting from work by Developers. Developers are accountable for creating a plan for the Sprint, the Sprint Backlog. The Scrum Master is accountable for establishing Scrum as defined in the Scrum Guide. They do this by helping everyone understand Scrum

theory and practice, both within the Scrum Team and the organization. Every Scrum team must have a Product Owner and Scrum Master, as outcomes are affected by their participation and availability. The other options are false, as they imply that the Product Owner and Scrum Master roles are optional or interchangeable.

References: Scrum Guide

NEW QUESTION 232

What is the purpose of a Sprint Review?

- A. To take time to judge the validity of the project.
- B. To inspect the product increment with the stakeholders and collect feedback on next steps.
- C. To review the Scrum Team's activities and processes during the Sprint.
- D. To build team sprint.

Answer: B

NEW QUESTION 237

When Does a Developer become accountable for the value of a Product Backlog item selected for the Sprint? (choose the best answer)

- A. Never The entire Scrum Team is accountable for creating value every Sprint.
- B. At the Sprint Planning Event
- C. Whenever a team member can accommodate more work.
- D. During the Daily Scrum

Answer: B

Explanation:

According to the Scrum Guide, a Developer becomes accountable for the value of a Product Backlog item selected for the Sprint at the Sprint Planning event. This is when the Developers select items from the Product Backlog that they can commit to complete within a Sprint. The Developers are then responsible for creating a valuable Increment that meets the Definition of Done and the Sprint Goal. The other options are not valid, as they either imply that Developers are not accountable for value (such as never or whenever), or that they become accountable at a different time (such as during the Daily Scrum).

NEW QUESTION 239

Which two things should the Development Team do during the first Sprint? (Choose two.)

- A. Make up a plan for the rest of the project.
- B. Analyze, describe, and document the requirements for the subsequent Sprints.
- C. Develop at least one piece of functionality.
- D. Define the major product features and release plan architecture
- E. Create an increment of potentially releasable software.

Answer: CE

Explanation:

According to the Scrum Guide, the Development Team should do two things during the first Sprint: develop at least one piece of functionality and create an increment of potentially releasable software. These are the goals of every Sprint, regardless of its order. The other options are not things that the Development Team should do during the first Sprint, as they are either out of scope (such as making a plan for the rest of the project or defining major product features and release plan architecture) or unnecessary (such as analyzing, describing, and documenting requirements for subsequent Sprints).

NEW QUESTION 242

When many Development Teams are working on a single product, what best describes the definition of "Done"? (Choose the best answer.)

- A. Each Development Team defines and uses its own
- B. The differences are discussed and reconciled during a hardening Sprint.
- C. It depends.
- D. Each Development Team uses its own but must make their definition clear to all other teams so the differences are known.
- E. All Development Teams must have a definition of "Done" that makes their combined work potentially releasable.

Answer: D

Explanation:

When many Development Teams are working on a single product, the definition of "Done" must be shared by all Development Teams and make their combined work potentially releasable, as stated in [4]: "When multiple teams work together on one product they must mutually define and comply with the same Definition of Done. This makes sure all Increments adhere to a consistent quality level."

NEW QUESTION 244

When multiple teams work together on the same product, each team should maintain a separate Product Backlog.

- A. True
- B. False

Answer: B

Explanation:

The correct answer is B, because when multiple teams work together on the same product, they should not maintain separate Product Backlogs. The Scrum Guide states that "multiple Scrum Teams often work together on the same product. One product goal unites them. Therefore, they must mutually define and comply with a definition of 'Done' that applies to their combined work product. ... Multiple Scrum Teams working on the same product use the same Product Backlog."

NEW QUESTION 246

Which two of the following are appropriate topics for discussion during a Sprint Retrospective? (Choose two.)

- A. Identifying high priority process improvements for the next Sprint.
- B. The order of items in the Product Backlog.
- C. How the team collaborates.
- D. Documenting acceptance criteria for items in the next Sprint.

Answer: AC

Explanation:

According to the Scrum Guide¹, the purpose of the Sprint Retrospective is to plan ways to increase quality and effectiveness. The Scrum Team inspects how the last Sprint went with regards to individuals, interactions, processes, tools, and their Definition of Done. Inspected elements often vary with domain, practices, and people involved. The Scrum Team identifies the most helpful changes to improve its effectiveness. The most impactful improvements are addressed as soon as possible. They may even be added to the Sprint Backlog for the next Sprint. Therefore, two appropriate topics for discussion during a Sprint Retrospective are:

- Identifying high priority process improvements for the next Sprint.
- How the team collaborates.

The other options are not relevant or appropriate for the Sprint Retrospective. References: Scrum Guide

NEW QUESTION 248

A new Developer is having continuing conflicts with existing members or the scrum Team, which is impacting the delivery of the Increment It necessary, who is responsible for removing the Developer from the Scrum Team? (choose the best answer)

- A. The Scrum Master is responsible, they remove impediments
- B. The Product Owner is responsible, they control the return on investment (ROI)
- C. The hiring manager is responsible, they hired the Developer
- D. The Scrum Team is responsible

Answer: D

Explanation:

According to the Scrum Guide, the Scrum Team is responsible for removing a Developer from the Scrum Team if necessary, as they are self-managing and accountable for creating valuable Increments. The other options are not valid, as they imply that someone else outside the Scrum Team has the authority to remove a Developer (such as the Scrum Master, the Product Owner, or the hiring manager), which is not consistent with Scrum values and principles.

NEW QUESTION 250

Which three of the following are time-boxed events in Scrum? (Choose the best three answers.)

- A. Release Planning.
- B. Release Retrospective.
- C. Sprint Retrospective.
- D. Sprint Planning.
- E. Sprint Testing.
- F. Sprint 0.
- G. Daily Scrum.

Answer: CDG

Explanation:

According to the Scrum Guide, the time-boxed events in Scrum are Sprint Retrospective, Sprint Planning, and Daily Scrum. These events have a maximum duration that cannot be exceeded. The other options are not time-boxed events in Scrum, as they are either not part of Scrum (such as Release Planning, Release Retrospective, Sprint Testing, and Sprint 0) or not events at all (such as Definition of Done).

NEW QUESTION 251

How do you know that a Development Team is cross-functional?

- A. Development Team has all the skills to create a potentially releasable increment by the end of every Sprint.
- B. A few of the Development Team members pair program and do Test Driven Development.
- C. There are no conflicts within the Development Team.
- D. Every member of the Development Team is able to perform every task.

Answer: A

Explanation:

According to the Scrum Guide, a Development Team is cross-functional if it has all the skills to create a potentially releasable Increment by the end of every Sprint. The other options are not indicators of cross-functionality, as they are either specific practices (such as pair programming or test driven development) or irrelevant factors (such as conflicts within the team or ability to perform every task).

NEW QUESTION 254

When do Development Team members take ownership of a Sprint Backlog item?

- A. At the Sprint planning meeting.
- B. During the Daily Scrum.
- C. Neve
- D. All Sprint Backlog Items are “owned” by the entire Development Team, even though each one may be done by an individual Development Team member.
- E. Whenever a team member can accommodate more work.

Answer: C

Explanation:

According to the Scrum Guide¹, the Sprint Backlog is the property of the Developers and no one else can tell them which items they should work on. The Developers can select any item from the Product Backlog that they forecast they can complete within a Sprint. The Developers are self-organizing and decide how to turn Product Backlog items into an Increment of value. Therefore, no one owns a Sprint Backlog item, but the entire Development Team is accountable for it.
References: Scrum Guide

NEW QUESTION 257

If burndown charts are used to visualize progress, what does a trend line through a release burndown chart indicate?

- A. The evolution of the cost spent on the project.
- B. When all work will be completed to the Scrum Team can be released for other work.
- C. When the work remaining will likely be completed if nothing changes on the Product Backlog or the Development Team.
- D. When the project will be over if the Product Owner removes work that is equal in effort to any new work that is added.

Answer: C

Explanation:

a burndown chart is a graphical representation of work left to do versus time. It is very useful for predicting when all of the work will be completed. It is often used in agile software development methodologies such as Scrum. However, burndown charts can be applied to any project containing measurable progress over time. A release burndown chart tracks progress across multiple Sprints towards a product release. It shows how much work remains in the Product Backlog at any given time during the release cycle. A trend line through a release burndown chart indicates when the work remaining will likely be completed if nothing changes on the Product Backlog or the Development Team.

NEW QUESTION 260

A Scrum Master is introducing Scrum to a new Development Team. The Development Team has decided that a Sprint Retrospective is unnecessary. What action should the Scrum Master take?

- A. Call a meeting between the Development Team and senior management.
- B. Comply with the decision of the self-organizing team.
- C. Consult with the Product Owner to see how he/she feels about the situation.
- D. Begin facilitating productive and useful Sprint Retrospectives.

Answer: D

Explanation:

The correct answer is D, because if a new Development Team decides that a Sprint Retrospective is unnecessary, the Scrum Master should begin facilitating productive and useful Sprint Retrospectives. The Scrum Guide states that “the purpose of the Sprint Retrospective is to plan ways to increase quality and effectiveness. ... During each Sprint Retrospective, the Scrum Team plans ways to improve product quality by adapting the definition of ‘Done’ as appropriate.” Therefore, the Scrum Master should help the Development Team understand the value and importance of the Sprint Retrospective, and make it an engaging and constructive event.

NEW QUESTION 263

How should a Development Team deal with non-functional requirements?

- A. Ensure every Increment meets them.
- B. Make sure the release department understands these requirements, but it is not the Development Team's responsibility.
- C. Handle them during the Integration Sprint preceding the Release Sprint.
- D. Assign them to the lead developers on the team.

Answer: A

Explanation:

The correct answer is A, because the Scrum Guide states that “the definition of ‘Done’ is a formal description of the state of the Increment when it meets the quality measures required for the product.” Therefore, non-functional requirements should be part of the definition of ‘Done’ and ensure every Increment meets them.

NEW QUESTION 265

The Scrum Master observes the Product Owner struggling with ordering the Product Backlog. What is an appropriate action for the Scrum Master to take?

- A. Suggest the Product Owner extend the Sprint, so he can have more time to order the Product Backlog.
- B. Suggest that the Development Team does the ordering to be sure that it is a feasible ordering of work.
- C. Offer the Product Owner help in understanding that the goal of ordering the Product Backlog is to maximize value.
- D. Present the Product Owner with an ordered Product Backlog to use.
- E. Encourage the Product Owner to work with the Development Team to see which items technically are fastest to implement.

Answer: C

Explanation:

According to the Scrum Guide¹, ordering Product Backlog items is solely up to the Product Owner's discretion. The Product Owner orders items in the Product Backlog to best achieve goals and missions. To do this, they optimize value by considering various factors such as cost and benefit, risk, dependencies, date needed, etc. The Product Owner is responsible for maximizing the value of the work the Development Team does. The Scrum Master is accountable for establishing Scrum as defined in the Scrum Guide. They do this by helping everyone understand Scrum theory and practice, both within the Scrum Team and the organization. Therefore, an appropriate action for the Scrum Master to take if the Product Owner is struggling with ordering the Product Backlog is to offer the Product Owner help in understanding that the goal of ordering the Product Backlog is to maximize value.

NEW QUESTION 270

One of the Scrum events is the Daily Scrum. What are two intended outcomes of the Daily Scrum?
(choose the best two answers)

- A. An updated Scrum board to make Sprint progress transparent for the stakeholders
- B. Identification of impediments that may prevent the Developers from achieving the Sprint Goal.
- C. A status report for the upper management indicating what each individual has done, will be doing, and what is impeding him/her.
- D. A shared understanding of the most important work to be undertaken next to achieve the best possible progress toward the Sprint goal.
- E. An update of completed tasks and of the remaining work so the Scrum Master can plan the next day.

Answer: BD

Explanation:

According to the Scrum Guide, two intended outcomes of the Daily Scrum are identification of impediments that may prevent the Developers from achieving the Sprint Goal and a shared understanding of the most important work to be undertaken next to achieve the best possible progress toward the Sprint Goal. These outcomes help the Developers to inspect their progress, plan their work, and collaborate effectively. The other options are not intended outcomes of the Daily Scrum, as they are either irrelevant (such as updating a Scrum board) or inappropriate (such as providing a status report or an update of completed tasks).

NEW QUESTION 275

Why is the Daily Scrum held at the same time and same place?

- A. The consistency reduces complexity.
- B. The place can be named.
- C. The Product Owner demands it.
- D. Rooms are hard to book and this lets it be booked in advance.

Answer: A

Explanation:

According to the Scrum Guide, the Daily Scrum is held at the same time and same place to reduce complexity and promote consistency. The other options are not valid reasons for holding the Daily Scrum at the same time and same place, as they are either irrelevant (such as naming the place) or incorrect (such as being demanded by the Product Owner or booking rooms in advance).

NEW QUESTION 279

As the Sprint Planning meeting progresses, the Development Team sees that the workload is greater than they can handle. Which two are valid actions? (Choose two.)

- A. Recruit additional Development Team members before the work can begin.
- B. The Development Team ensures that the Product Owner is aware, starts the Sprint, and monitors progress.
- C. Cancel the Sprint.
- D. Remove or change selected Product Backlog items.
- E. The Development Team works overtime during this Sprint.

Answer: BD

Explanation:

The correct answers are B and D, because the Scrum Guide states that “the number of items selected from the Product Backlog for the Sprint is solely up to the Development Team. Only the Development Team can assess what it can accomplish over the upcoming Sprint.” Therefore, the Development Team can remove or change selected Product Backlog items in agreement with the Product Owner if they see that the workload is greater than they can handle. The Development Team should also ensure that the Product Owner is aware of the situation, start the Sprint, and monitor progress.

NEW QUESTION 282

Which Scrum Values are exhibited by not building Product Backlog items that have low business value? (Choose three.)

- A. Economic Value Added.
- B. Respect.
- C. Focus.
- D. Earned Value.
- E. Courage.

Answer: BCE

Explanation:

According to the Scrum Guide¹, there are five values that guide decisions within Scrum teams:

- Commitment
- Focus
- Openness
- Respect
- Courage

By not building Product Backlog items that have low business value, Scrum teams exhibit respect for their stakeholders and customers, as they deliver what is most valuable and relevant for them. They also exhibit focus, as they concentrate on what matters most for achieving their Product Goal and Sprint Goal. They also exhibit courage, as they are willing to say no to low-value work and face possible conflicts or disagreements.

NEW QUESTION 284

When can a Development Team cancel a Sprint?

- A. It can't

- B. Only Product Owners can cancel Sprints.
- C. When functional expectations are not well understood.
- D. When the Product Owner is absent too often.
- E. When the selected Product Backlog items for the Sprint become unachievable.
- F. When a technical dependency cannot be resolved.

Answer: A

Explanation:

The correct answer is A, because the Scrum Guide states that “a Sprint can be cancelled before the Sprint time-box is over. Only the Product Owner has the authority to cancel the Sprint, although he or she may do so under influence from the stakeholders, the Development Team, or the Scrum Master.” Therefore, a Development Team cannot cancel a Sprint by itself.

NEW QUESTION 287

What two techniques could the Scrum Master use when the Scrum Team gets caught in an internal disagreement about which development techniques to apply? (Choose two.)

- A. Involve the complete Development Team.
- B. Use coaching techniques; such as open questions and active listening.
- C. Ask an external technical specialist to make the decision.
- D. Send every team member to the company’s HR department to express their concerns.

Answer: AB

Explanation:

According to the Scrum Guide¹, the Developers are self-organizing and decide how to turn Product Backlog items into an Increment of value. No one tells them how to do their work. The Developers are accountable for creating a plan for the Sprint, the Sprint Backlog. The Scrum Master is accountable for establishing Scrum as defined in the Scrum Guide. They do this by helping everyone understand Scrum theory and practice, both within the Scrum Team and the organization. Therefore, when the Scrum Team gets caught in an internal disagreement about which development techniques to apply, two techniques that the Scrum Master could use are:

- Involve the complete Development Team, as they are responsible for managing and refining their own work.
- Use coaching techniques, such as open questions and active listening, to help the Development Team resolve their conflict and reach a consensus.

The other options are not appropriate, as they may undermine the self-organization and empowerment of the Developers.
