

## Exam Questions PL-100

Microsoft Power Platform App Maker

<https://www.2passeasy.com/dumps/PL-100/>

### NEW QUESTION 1

HOTSPOT - (Topic 4)

HOTSPOT

A company uses Microsoft Teams and Microsoft 365. Employees use Microsoft Excel to create checklist and capture measurements.

The company requires a Microsoft Power Platform app to consolidate the checklists and perform the measurements- Network connectivity may not be available when measurements are taken.

Which features should you use? To answer, select the appropriate options in the answer area

NOTE: Each coned selection is worth one point.

Answer Area

Requirement	Feature
App type	<input checked="" type="checkbox"/> Model-driven app <input type="checkbox"/> Canvas app <input type="checkbox"/> Model-driven app
Data source	<input checked="" type="checkbox"/> Cloud Excel table <input type="checkbox"/> Local Excel table <input type="checkbox"/> Cloud Excel table
Offline mode	<input checked="" type="checkbox"/> Power Apps mobile <input type="checkbox"/> Field Service Mobile <input type="checkbox"/> Power Apps mobile <input type="checkbox"/> Power Apps for Windows <input type="checkbox"/> Power Apps wrap

A. Mastered

B. Not Mastered

Answer: A

Explanation:

Answer Area

Requirement	Feature
App type	<input checked="" type="checkbox"/> Model-driven app <input checked="" type="checkbox"/> Canvas app <input checked="" type="checkbox"/> Model-driven app
Data source	<input checked="" type="checkbox"/> Cloud Excel table <input type="checkbox"/> Local Excel table <input checked="" type="checkbox"/> Cloud Excel table
Offline mode	<input checked="" type="checkbox"/> Power Apps mobile <input type="checkbox"/> Field Service Mobile <input checked="" type="checkbox"/> Power Apps mobile <input type="checkbox"/> Power Apps for Windows <input type="checkbox"/> Power Apps wrap

### NEW QUESTION 2

- (Topic 4)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company is deploying Microsoft Power Platform components to streamline a job candidate screening process.

The human resources (HR) representatives of the company plan to attend school career fairs. The HR representatives must qualify and enter potential job candidates into a Power Apps app. The HR representatives must enter the following information for each candidate:

Field name	Data type	Criteria for follow up
Name	Text	No
Degree	Text	Yes
First available hire date	Date	Yes
Initial impression	Integer 0-10	Yes
Resume	Picture	No
Not currently viable	Boolean	Yes
Follow up	Boolean	NA

If a candidate is currently unqualified for a job position but would eventually qualify based on follow-up criteria, the follow-up checkbox must be selected or cleared in the system immediately.

The company plans to create a similar Power Apps app that will contain the same business use case, but for internal employees and promotions.

You need to create a Power Apps app solution to automatically mark the candidate for follow up.

Proposed solution: Use a Common Data Service workflow with a PowerQuery on the data entity.

Does the solution meet the goal?

A. Yes

B. No

Answer: A

Explanation:

Process (Workflow) table/entity reference is a set of logical rules that define the steps necessary to automate a specific business process, task, or set of actions to be performed.

Common Data Service workflow support: Filter triggers based on which attributes change - You can control which field changes trigger your automated flows. For example, trigger your flow only when the status field changes while ignoring all other fields that may change.

Reference:

https://docs.microsoft.com/en-us/business-applications-release-notes/april19/microsoft-

NEW QUESTION 3

- (Topic 4)

You create a Power Platform solution. Solution data is stored in a variety of documented cloud services.

You must also be able to connect to one or more industry data sources. You need to configure the data sources.

What should you do?

- A. Create a business process flow.
- B. Create a data policy template.
- C. Create a UI flow.
- D. Use an existing data connector.

Answer: D

Explanation:

In Power Apps, add a data connection to an existing canvas app or to an app that you're building from scratch. Your app can connect to SharePoint, Common Data Service, Salesforce, OneDrive, or many other data sources.

Note:

Add data source

- \* 1. In the center pane, select connect to data to open the Data pane.
- \* 2. Select Add data source.
- \* 3. If the list of connections includes the one that you want, select it to add it to the app. Otherwise, skip to the next step.
- \* 4. Select New connection to display a list of connections.
- \* 5. In the search bar, type or paste the first few letters of the connection you want, and then select the connection when it appears.

- \* 6. Select Create to both create the connection and add it to your app.

Reference:

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/add-data-connection

NEW QUESTION 4

DRAG DROP - (Topic 4)

DRAG DROP

You are designing a new model-driven app for salespeople at a company.

The company requires that all new line-of-business apps must use as much native functionality as possible to avoid having developers maintain code.

You need to determine how to implement the app's business logic.

Which method should you use? To answer, drag the appropriate methods to the correct requirements. Each method may be used once, more than once, or not at all. You may

NOTE: Each correct selection is worth one point.

Methods	Answer Area	Requirement	Method
Business rules		Validate the postal code format based on the state or province entered by a user.	
Power Automate flows		Ensure that the app can communicate with other business applications by using existing connectors.	
Business process flows			

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Methods

Business rules

Power Automate flows

NEW QUESTION 5

- (Topic 4)  
A large construction company has 120 departments. Each department has a Microsoft Teams channel. The company creates training content for each department. All training content for a department is hosted in the channel for that department You must create a chatbot for the company that helps employees find relevant training. Employees must not be able to modify the chatbot. You need to create the chatbot Which three actions should you perform"\* Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Create a bot for each departmental channel.
- B. Create one training bot for organization-wide deployment.
- C. Create an entity for each department
- D. Create a topic for each department.
- E. Create a topic for each trade.

Answer: BCD

NEW QUESTION 6

DRAG DROP - (Topic 4)  
You create an app with multiple screens. Test users report that the size and type of gallery displayed on each screen are different. You must improve the consistency for the app screens. You need to create a reusable gallery that displays information based on the current record. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Actions

Add a gallery control.

Add an input property.

Create a component.

Add a screen.

Create a form.

Add an output property.

Answer Area

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

- Create a component  
- Add an input property  
- Add a gallery control  
From <https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/create-component> step 10 and 11

NEW QUESTION 7

DRAG DROP - (Topic 4)  
A company has the following divisions: wholesale and retail. The manufacturer wants to create a single Power BI report to allow users to view data from a Microsoft SQL Server database. You need to ensure that each user sees data only for the team to which the user is assigned. How should you secure the report? To answer, drag the appropriate options to the correct action. Each option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point.

Options	Answer Area	
Power BI Service	Action	Option
Power BI Desktop	Create the team as a role.	Option
Common Data Service	Add members to the role.	Option
Power Platform Admin center		

- A. Mastered  
 B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: Power BI Desktop

You can define roles and rules within Power BI Desktop. When you publish to Power BI, it also publishes the role definitions.

To define security roles, follow these steps.

? Import data into your Power BI Desktop report, or configure a DirectQuery connection.

? From the Modeling tab, select Manage Roles.

? From the Manage roles window, select Create.

? Etc.

Box 2: Power BI Service

After you save your report in Power BI Report Server, you manage security and add or remove members on the server.

\* 1. In Power BI Desktop, save the report to Power BI Report Server. You need to use the version of Power BI Desktop for Power BI Report Server.

\* 2. In Power BI Report Service, select the ellipsis (...) next to the report.

\* 3. Select Manage > Row-level security.

On the Row-level security page, you add members to a role you created in Power BI Desktop.

**NEW QUESTION 8**

- (Topic 4)

You are using Test Studio to test a Power Apps canvas app. You need to ensure that the app conforms to several use cases. What should you do first?

- A. Save the app to the cloud.  
 B. Create test cases for each requirement.  
 C. Save the app to your computer.  
 D. Create a test suite.  
 E. Record test cases for each requirement.

**Answer:** D

**Explanation:**

Create a test suite.

By default, a test suite and test case are created for you in Test Studio. Test suites are used to organize your test cases.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/working-with-test-studio>

**NEW QUESTION 9**

- (Topic 4)

You create a canvas app for technicians at a computer store. You assign technicians cases to work on. The technicians update cases at the end of customer site visit.

The manager wants the technicians to sell warranties to the customers. If a customer agrees to purchase a warranty, technicians use the canvas app to immediately alert the sales team, and then the technician records details about the warranty into the app.

You need to create a flow to alert the sales team. Which type of trigger should you use?

- A. Flow button for mobile  
 B. Office 365 Outlook

C. Common Data Service

Answer: A

Explanation:

Create a button flow to run routine tasks by simply tapping a button. Customize your flow by allowing the user to provide specific details that will be used when the flow runs.

Note: There are many repetitive tasks that we all wish we could run with just a tap of a button. For example, you may need to quickly email your team to remind them to join the daily team sync, or you may want to start a new Visual Studio Codespaces build of your code base after you've been notified that there are no more checkins planned for the day. Button flows allow you to accomplish these and many other tasks simply by tapping a button on your mobile device.

Reference:

<https://docs.microsoft.com/en-us/power-automate/button-flow-with-user-input-tokens>

NEW QUESTION 10

DRAG DROP - (Topic 4)

You are creating a canvas app that reads and writes to a data source.

You need to configure the app to perform create and update data operations.

Which functions should you use? To answer, drag the appropriate functions to the correct data operations. Each function may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE; Each correct selection is worth one point.

Functions

Patch

Update

AddColumns

Answer Area

Data operation

Replace an entire record.

Update specific columns.

Function

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Patch

AddColumns

NEW QUESTION 10

- (Topic 4)

You create a weekly report app as a canvas app. The data source for the app is a Microsoft SharePoint list.

The file that contains the weekly report must be attached to each submission made in the app. Employees must modify the report through the canvas app after the initial submission.

The manager must be notified by email when an employee updates the report. You need to create cloud flows.

Which SharePoint trigger should you use?

- A. When an item is created
- B. When an item or file is modified
- C. When a file is created (properties only)
- D. When a file is created in a folder

Answer: B

NEW QUESTION 14

HOTSPOT - (Topic 4)

A company uses Power Apps. The company gathers product improvement suggestions at tradeshow by using tablet devices.

A product improvement suggestion has two parts: a topic and a comment. Attendees can enter up to 10 suggestions. You create a canvas app to allow attendees to enter suggestions. The wireless network connection inside the tradeshow is unreliable.

You need to ensure that the tablet devices save all suggestions.

Which solution technologies should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Action	Solution technology
Save suggestions while visitors enter data.	Collection
Save suggestions for future processing.	Export

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Action	Solution technology
Save suggestions while visitors enter data.	Collection
Save suggestions for future processing.	Export

NEW QUESTION 17

- (Topic 4)

A company has an on-premises system that stores product information. The company plans to replace the information with a Power Platform solution that uses the Common Data Service.

The Power Platform solution needs to use data from the product information system. You need to transform and import the data from the product information system. Which two tools should you use? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Dataflow
- B. Business process flow
- C. Power BI Desktop
- D. Data gateway

Answer: AD

Explanation:

The on-premises data gateway acts as a bridge to provide quick and secure data transfer between onpremises data (data that isn't in the cloud) and several Microsoft cloud services. These cloud services include Power BI, PowerApps, Power Automate, Azure Analysis Services, and Azure Logic Apps. By using a gateway, organizations can keep databases and other data sources on their on-premises networks, yet securely use that on-premises data in cloud services. Can use the Power Platform dataflows to load entity in CDS with the option to transform data.

Reference:

<https://docs.microsoft.com/en-us/power-bi/connect-data/service-gateway-onprem> <https://nishantrana.me/2020/07/07/load-data-from-sql-on-premise-to-cds-common-data-service-using-powerplatform-dataflows-in-power-apps/>

NEW QUESTION 19

HOTSPOT - (Topic 4)

You need to create a model-driven app without using code.

Which tools should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement

Tool

Select the forms and views that the app will use.

Site Map designer
Solution Explorer
App designer
Entity view

Design the navigation for the app.

Site Map designer
Dynamics 365 Admin center
Microsoft Azure DevOps

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: App designer

As an app maker, you can create and edit public views by using Power Apps.

Box 2: Site Map designer

Site maps define the navigation for your app. Create a site map for your app with ease by using the tile-based site map designer.

**NEW QUESTION 20**

DRAG DROP - (Topic 4)

DRAG DROP

A company is creating Power Apps apps for their customer service team.

You must create a final released solution to export to their test environment that cannot be changed in the new environment.

You need to determine the types of solutions to use.

Which type of solution should you use? To answer, drag the appropriate solution types to the correct conditions. Each solution type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Solution type	Condition	Solution type
Managed	Assign a publisher for the first time	Solution type
Unmanaged	Export the solution	Solution type

A. Mastered

B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: Unmanaged

Unmanaged solutions are used in development environments while you make changes to your application.

Box 2: Managed

Managed solutions are used to deploy to any environment that isn't a development environment for that solution.

**NEW QUESTION 25**

- (Topic 4)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You build a canvas app for a manufacturing company. The company receives parts and materials from many vendors. You create a form to collect information from packing slips.

Receivers must be able to take a picture of packing slips to receive materials instead of manually entering data in the app.

You need to ensure that users can scan packing slip information into the form. Proposed solution: Use a Category classification model.

Does the solution meet the goal?

A. Yes

B. No

**Answer:** B

**Explanation:**

A Category classification model categorizes text by its meaning. Reference:

<https://knowledgefrommanish.com/powerplatform/ai-builder-entity-extraction-ai-model/>

**NEW QUESTION 26**

- (Topic 4)

You are an app maker. You are creating a canvas app. You do not have access to Power BI.

You need to add charts to the app.

Which three chart types can you add directly to the canvas app? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. pie

B. area

C. funnel

D. column

E. line

**Answer:** ADE

**Explanation:**

You can use line charts, pie charts, and bar charts to display your data in a canvas app. Add a bar chart to display your data:

\* 1. On the Home tab, add a screen.

\* 2. On the Insert tab, select Charts, and then select Column Chart.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/use-line-pie-bar-chart>

NEW QUESTION 30

DRAG DROP - (Topic 4)  
DRAG DROP

A company uses Microsoft Power Platform. Users create charts based on specific needs in You create a solution in a development environment. You rebuild personal charts of the users inside the solution. All charts must appear on one page. You need to create a single page that includes all charts without switching to classic. Which three steps should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Create a new dashboard.

Open the solution in the Maker portal.

Add the charts to the dashboard.

Create a new interactive experience dashboard.

NEW QUESTION 32

- (Topic 4)  
You create a canvas app.  
A user is not able to determine which field currently has focus. You run App checker to identify errors.  
You need to verify that the focused border thickness is set to a value greater than zero. Which section of the App checker results should you check?

- A. Rules
- B. Performance
- C. Accessibility
- D. Runtime

Answer: C

Explanation:

The Accessibility checker classifies each issue as an error, a warning, or a tip based the issue's severity.  
Issues include:  
? Focus isn't showing  
When the FocusBorderThickness of a control is set to 0. It is good practice to ensure a proper color-contrast ratio between the focus border and the control itself so it's clearly visible.  
Reference:  
<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/accessibility-checker>

NEW QUESTION 37

DRAG DROP - (Topic 4)  
You are designing a data model for a new app. The app will be supported by two tables. TableA will contain data that is unique to your industry. TableB will provide access to readonly data from an Azure SQL database.  
You need to configure the tables.  
Which table type should you use? To answer, drag the appropriate table types to the correct tables. Each table type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.  
NOTE: Each correct selection is worth one point.

Table types

Custom

NEW QUESTION 42

- (Topic 4)  
A company has hundreds of warehouses. You are developing an app for the shipping department at the company. The app must be able to provide the warehouse address for shipments. You need to create the warehouse field on the app form. Which field type should you use?

- A. Lookup
- B. Choice
- C. Choices
- D. Text

Answer: A

NEW QUESTION 43

- (Topic 3)  
You need to resolve the instructor's issue and ensure that the same issue does not occur again. What should you use?

- A. Gallery
- B. Combo box
- C. Custom component
- D. Choices

Answer: D

NEW QUESTION 44

HOTSPOT - (Topic 2)  
You need to resolve the issues found during testing.  
Which option should you use? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point.

Issue

Option

Testers see all time entries.

Hierarchical security

Security group

Security role

Testers are able to edit existing time entries.

Control property

Field-level security

Security role

Managers cannot see required information.

Access team template

Field-level security

Hierarchical security

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Graphical user interface, text, application, email Description automatically generated  
Box 1: Security role  
Scenario: Employees must only be able to access their own time tracking records from the app.  
Testers report that they can see time entries in the Time Tracker app, not just their own.  
Box 2: Field-level security  
Scenario: Employees must only be able to modify time records for the current and previous day.  
Testers report that they can edit any existing time entries.  
Box 3: Hierarchical security  
You use field security tables to apply field-level security, which restricts field access to specified users and teams.

NEW QUESTION 49

- (Topic 2)  
You need to resolve the user's issue with the time tracking app.

Which two actions should you perform? Each correct answer presents part of the solution.  
 NOTE: Each correct selection is worth one point.

- A. Add a component to the time tracking screen for tracking total time.
- B. Create a new component inside of the component library for the time tracking app.
- C. Upload the component to AppSource.
- D. Add the Total Time field to the screen and set the value of the field property to Rollup

**Answer:** AB

**Explanation:**

Scenario Issue: Users want to be able to see their weekly total time entered from all screens.  
 A component library provides a centralized and managed repository of components for reusability.  
 Reference:  
<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/component-library>

**NEW QUESTION 52**

- (Topic 2)

You need to implement logic in the app for lost sales. What should you do?

- A. Create a business process flow.
- B. Define a business rule for the Sales Log edit form.
- C. Set the required field property of the Won/Lost field to Required.
- D. Create a formula for the Description field that uses the Update function.

**Answer:** B

**Explanation:**

Scenario: Requests for quotes are currently stored in a Sales Log workbook. The workbook includes the following information:  
 ? Status of the Request for Quote (RFQ) with the values of Won, Lost, No Bid, and Cancelled  
 Salespeople often do not set status of RFQs in the Sales Log to Won when a sale is closed and the customer purchase order is received.  
 You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins. Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.  
 Business rules defined for an entity apply to both canvas apps and model-driven apps if the entity is used in the app.  
 Reference:  
<https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/data-platform-create-business-rule>

**NEW QUESTION 57**

- (Topic 1)

You need to resolve the issue for User1.  
 What should you use? To answer, select the appropriate options in the answer area.  
 NOTE: Each correct selection is worth one point.

Requirement	Option
Submit a status report.	<div> <div></div> <div> Dynamics 365 mobile app                     Power Apps Studio                     Power Apps mobile app                     Azure mobile app                 </div> </div>
Edit an existing status report.	<div> <div></div> <div> Azure SQL Database                     Connector                     SQL Lite DB                     Collections                 </div> </div>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Graphical user interface, text, application Description automatically generated  
 Box 1: Power Apps mobile app Scenario:  
 User1 often works in a warehouse that does not have internet connectivity. User1 needs to edit an existing status report and submit a new status report.  
 The app must be able to run both online and offline. If the mobile device on which the app runs is connected to the internet, the app must immediately submit the status report.  
 You can build offline capabilities in your PowerApps app so your app users can access some data or save some data even when they don't have an internet connection.  
 Box 2: Connector  
 Scenario: Azure SQL Database is used to store other data  
 Use the SQL Server connector to connect to SQL Server, in either Azure or an on- premises database, so that you can manage your data with create, read, update, and delete operations.

#### NEW QUESTION 62

- (Topic 1)

You need to provide the app to Tailwind Traders. What should you do?

- A. Within Managed Properties, set the value of the Allow customizations option to true
- B. Export the app as a managed solution.
- C. Use the Share App feature.
- D. Within Managed Properties, set the value of the Allow customizations option to false
- E. Export the app as a managed solution.
- F. Within Managed Properties, set the value of the Allow customizations option to false
- G. Export the app as an unmanaged solution.

**Answer:** C

#### Explanation:

Scenario: The completed app and all supporting components must be provided to Tailwind Traders. Tailwind Traders must not be able to make changes to any of the components.

Managed Solution: A managed solution is a finalized solution that can be distributed and installed. They are created by exporting an unmanaged solution by setting restrictions to prevent any further customizations. The whole point of Managed is locking down the Component states so they cannot be edited. Deleting the Managed Solution will remove all its customisations as well as data contained. Managed Solutions become read only once deployed so they cannot be manipulated.

Reference:

<https://powerusers.microsoft.com/t5/Power-Apps-Pro-Dev-ISV/Managed-vs-Unmanaged/td-p/495685>

#### NEW QUESTION 65

- (Topic 4)

You are creating a canvas app for a company.

The app must access data from a private web service that is provided by the company. You need to set up the connector.

Which connector type should you use?

- A. Custom
- B. Standard
- C. First-party
- D. Premium

**Answer:** A

#### NEW QUESTION 67

- (Topic 4)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are creating a canvas app that displays a list of accounts.

Users must be able to select an account and view details for the account. The app must include a feature that brings the user back to the list of accounts.

You add a blank screen named Screen\_Accounts and add a gallery named and add another blank screen named Screen\_AccountDetail.

You need to complete the app. Solution:

? Add an edit form to Screen\_AccountDetail and set the Default Mode of the form to View.

? Set the OnSelect property of Gallery\_Accounts to Navigate(Screen\_AccountDetail).

? Set the data source of the form to Accounts.

? Set the Item property of the form to Selected.

? Add a back icon on Screen\_AccountDetail and set its OnSelect property to Navigate(Screen\_Accounts).

Does the solution meet the goal?

- A. Yes
- B. No

**Answer:** A

#### Explanation:

View, edit, or create an item, save the contents, and reset the controls in an Edit form control.

FormMode.View: The form is populated with an existing record but the user cannot modify the values of the fields.

This function is often invoked from the OnSelect formula of a Button or Image control.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-form>

#### NEW QUESTION 69

- (Topic 4)

You need to set the value for a global variable named RunningTotal to 5 and navigate to the previous screen named MainScreen.

Which formula should you use?

- A. UpdateContext( { RunningTotal: 5 } ); Navigate( MainScreen, ScreenTransition.Cover, RunningTotal );
- B. If( Value(TextBox1.Text) >= 0, (Set( RunningTotal, 5); Back();), Color.Green )
- C. UpdateContext( { RunningTotal:5 } ); Back()
- D. Set( RunningTotal, 5 ); Back();

**Answer:** D

#### Explanation:

You set the value of the global variable with the Set function. Set( MyVar, 1 ) sets the global variable MyVar to a value of 1.

Use the Back and Navigate function to change which screen is displayed. Reference:  
<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/working-with-variables>  
<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-navigate>

#### NEW QUESTION 70

HOTSPOT - (Topic 4)

You are a technical assistant for a legal services organization. The company uses SharePoint to manage documents and Microsoft Dataverse as the data store. The company has strict rules about access, permissions, and privacy.

Lawyers and paralegals use Microsoft Teams for communications and collaboration. Employees use personal devices to access legal files. You do not have access to the admin area in Microsoft Power Platform.

You need to ensure that these rules are observed consistently and managed in one place.

Which type of app should you create? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

#### Answer Area

Requirement	App type
Access client billing details	<div> <div></div> <div> Canvas app in Microsoft Teams  Canvas app in SharePoint  Model-driven app in SharePoint  Model-driven app in Microsoft Teams </div> </div>
Log phone calls and schedule appointments with clients and the team assigned to them	<div> <div></div> <div> Dynamics 365 App for Outlook  Microsoft Teams calendar  SharePoint calendar </div> </div>

- A. Mastered
- B. Not Mastered

Answer: A

#### Explanation:

Box 1: Model-driven app in Microsoft Teams

A user's ability to see and use apps is controlled by sharing the application with the user. Sharing of canvas apps is done directly with a user or Azure AD group but is still subject to Dataverse security roles. Sharing of model-driven apps is done via Dataverse security roles.

Box 2: Sharepoint Calendar

#### NEW QUESTION 75

- (Topic 4)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You build a canvas app for a manufacturing company. The company receives parts and materials from many vendors. You create a form to collect information from packing slips.

Receivers must be able to take a picture of packing slips to receive materials instead of manually entering data in the app.

You need to ensure that users can scan packing slip information into the form. Proposed solution: Use an Entity Extraction model.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

#### Explanation:

AI Builder entity extraction models recognize specific data in the text that you target based on your business needs.

The model identifies key elements in the text and then classifies them into predefined categories. This can help you transform unstructured data into structured data that's machine-readable. You can then apply processing to retrieve information, extract facts, and answer questions.

Note: Create a canvas app and add the text recognizer AI Builder component to your screen. This component takes a photo or loads an image from the local device, and then processes it to detect and extract text based on the text recognition prebuilt model. If it detects text in the image, the component outputs the text and identifies the instances by showing a rectangle for each instance in the image.

Reference:

<https://knowledgefrommanish.com/powerplatform/ai-builder-entity-extraction-ai-model/>

<https://docs.microsoft.com/en-us/ai-builder/prebuilt-text-recognizer-component-in-powerapps>

#### NEW QUESTION 76

- (Topic 4)

You create a custom table as part of a solution in the development environment. You deploy major version solutions as managed solutions to production. The organization does not allow new solutions to be created in the production environment.

When a minor update is made to a column length, users cannot enter entire values. You need to allow users to enter entire values in the column.

Solution: Update the column length in the production environment. Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

#### NEW QUESTION 78

- (Topic 4)

You create a new solution publisher and include a publisher prefix value.

Which two actions can you perform? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. You can change contact details of a publisher after you create the publisher
- B. When you change a solution publisher prefix, you can change the schema name for existing components
- C. You can change the schema name of a publisher after creating the publisher
- D. You can add a component from one solution to another solution that has a different publisher

**Answer:** AD

#### Explanation:

Once you introduce a publisher for a component in a managed solution, you can't change the publisher for the component.

Reference:

<https://docs.microsoft.com/en-us/power-platform/alm/solution-concepts-alm#solution-publisher>

#### NEW QUESTION 81

- (Topic 4)

In a Common Data Service database, you create a canvas app and a custom entity. The

app also reads data from the Account entity in the Common Data Service database.

Entity access permissions will be controlled by the Common Data Service User security role. You create a Common Data Service solution.

You need to replicate the changes to a new Common Data Service database.

Which two components should you include with the canvas app? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Custom entity
- B. Account entity
- C. Common Data Service User security role
- D. Sitemap

**Answer:** BC

#### NEW QUESTION 85

HOTSPOT - (Topic 4)

A company uses two SQL Server environments and two Common Data Service environments.

The company policy states that only specific administrators can create environments. SQL Server and Common Data Service groups must be distinct.

You need to assign security access.

What should you assign? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Role	Security access
Admin users for SQL environments	<div>▼</div> <div>Environment Maker</div> <div>Environment Admin</div> <div>System Administrator and Environment Security group</div> <div>Power Platform Administrator and Environment Security group</div>
Admin users for Common Data Service environments	<div>▼</div> <div>Environment Maker</div> <div>Environment Admin</div> <div>Global Administrator</div> <div>System Administrator</div>
Users that create Common Data Service apps	<div>▼</div> <div>System Customizer</div> <div>Environment Maker</div> <div>Environment Admin</div> <div>System Administrator</div>
Users that create SQL apps	<div>▼</div> <div>System Customizer</div> <div>Environment Maker</div> <div>Environment Admin</div> <div>System Administrator</div>

- A. Mastered
- B. Not Mastered

**Answer:** A

#### Explanation:

Box 1: System Administrator and Environment Security group Security model for the databases

When a database is created, the users who have environment roles assigned to them, will continue to maintain those privileges.

Users with Environment Admin role are now assigned to System Administrator role. Users with Environment Maker continue to possess the same role.

Box 2: Environment Admin  
TheEnvironment Adminrole can perform all administrative actions on an environment, including the following:  
? Add or remove a user from either the Environment Admin or Environment Maker role.

Box 3: Environment Maker  
Environment Maker: Can create new resources associated with an environment, including apps, connections, custom APIs, gateways, and flows using Microsoft Power Automate. However, this role doesn't have any privileges to access data within an environment. More information:

Box 4: System Customizer  
System Customizer: Has full permission to customize the environment. However, users with this role can only view records for environment entities that they create.

NEW QUESTION 87

DRAG DROP - (Topic 4)  
You are creating a Power Automate cloud flow.  
The data in the flow must perform the following actions:

- Return the first character of a string of text.
- Convert an array to a single string. You need to manipulate the data.

Which data operations should you use? To answer, drag the appropriate data operations to the correct changes. Each data operation may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Data operations

Join

Select

Compose

Filter array

Answer Area

Change

Return the first character of a string of text.

Convert an array to a single string.

NEW QUESTION 90

HOTSPOT - (Topic 4)  
A company is building a Power Apps app to track key project tasks.  
Users assign three tasks a risk status on a scale of 0 to 100 by using slider input controls named RiskStatus on the app. The highest risks use the risk status value of 100.  
If the combined value of all the tasks is 150 or above, a header bar on the screen must display the text HIGH RISK.  
You need to configure a solution to change the text on the header bar.  
How should you configure the app? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point.

Requirement	Configuration
Where should you apply logic to change the text?	<div><div></div><div>On the header control.</div><div>On each RiskStatus slider input.</div><div>In the global variables of the Power Apps app.</div><div>On the OnStart property of the Power Apps app.</div></div>
Which formula should you use?	<div><div></div><div>SUM(RiskStatus1.value,RiskStatus2.value,RiskStatus3.value)&gt;=150? "HIGH RISK" : " "</div><div>IF(SUM(RiskStatus1.value,RiskStatus2.value,RiskStatus3.value)&lt;150, " ", HIGH RISK)</div><div>Updateif((RiskStatus1.value+RiskStatus2.value+RiskStatis3.value)&gt;=150, "HIGH RISK")</div><div>UpdateContext(IF(RiskStatus1.value+RiskStatus2.value+RiskStatus3.value&gt;=150), "HIGH RISK")</div></div>

- A. Mastered  
B. Not Mastered

Answer: A

Explanation:

Box 1: On each RiskStatus slider input  
You can change the value based on input.  
Box 2: Updateif(..)

Use the UpdateIf function to modify one or more values in one or more records that match one or more conditions. The condition can be any formula that results in a true or false and can reference columns of the data source by name. The function evaluates the condition for each record and modifies any record for which the result is true.

#### NEW QUESTION 95

- (Topic 4)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a

A company has locations in multiple countries and regions across four continents. The company stores the total amount of each order in the local currency of the country/region where the customer is located. The company stores the applicable exchange rates in a custom US dollars (USD) exchange rate table.

You need to create a visualization that displays the total amount of orders by country/region in USD.

Proposed solution: Create a model-driven chart on the country/region table that aggregates the total amount of the orders by country/region.

Does the solution meet the goal?

- A. Yes
- B. No

**Answer: B**

#### Explanation:

Instead use a calculated field.

Need to calculate the exchange rate in USD.

Calculated columns are calculated in real-time when they are retrieved.

Reference:

<https://docs.microsoft.com/en-us/powerapps/developer/data-platform/calculated-rollup-attributes>

#### NEW QUESTION 99

- (Topic 4)

You complete work on a new canvas app in a development environment and add the app to a solution. You export the solution from the development environment and import the solution into a production environment.

After several days you notice that the background color for the canvas app in the production environment has changed from white to grey.

You need to determine why the background color changed.

What are two possible causes for the background color change? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. You recently changed the Office 365 theme.
- B. You exported a managed copy of the solution and imported the solution as an unmanaged solution.
- C. You modified the canvas app in the unmanaged solution.
- D. You exported and imported an unmanaged copy of the solution and a co-worker modified the canvas app.
- E. You chose a different theme from the Theme menu inside the canvas app.

**Answer: AC**

#### Explanation:

A: You can create a custom look and feel (a theme), for your app by making changes to the default colors and visual elements provided in the uncustomized system.

C: Unmanaged Solution: The beginning state of solution is the unmanaged solution state. During this phase, you can add, edit, update, remove, delete, and test any of the components of the solution. You also have the ability to create restrictions on the components within the solution.

Note: Managed Solution: A managed solution is a finalized solution that can be distributed and installed. They are created by exporting an unmanaged solution by setting restrictions to prevent any further customizations. The whole point of Managed is locking down the Component states so they cannot be edited.

Reference:

<https://powerusers.microsoft.com/t5/Power-Apps-Pro-Dev-ISV/Managed-vs-Unmanaged/td-p/495685>

<https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/create-themes-organization-branding>

#### NEW QUESTION 102

- (Topic 4)

You create a canvas app.

You need to ensure that there are no screen reader issues in the app.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Open Test Studio.	
Select <b>Formula</b> .	
Open the App checker.	
Select <b>Accessibility</b> .	
Select <b>Error</b> .	

Navigation arrows: > <

Order arrows: ^ v

- A. Mastered
- B. Not Mastered

**Answer: A**

#### Explanation:

#### NEW QUESTION 104

- (Topic 4)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are creating a canvas app.

You need to automatically detect bicycles in pictures taken with the camera.

Proposed solution:

? Create a Category Classification custom model in AI Builder.

? Train the model with pictures of bicycles and then publish the trained model.

? Add the Object Detector control to your canvas app.

Does the solution meet the goal?

A. Yes

B. No

**Answer: B**

#### Explanation:

Instead create an Object Detection custom model Reference:

<https://docs.microsoft.com/en-us/ai-builder/prediction-overview> <https://docs.microsoft.com/en-us/ai-builder/object-detector-component-in-powerapps>

#### NEW QUESTION 105

- (Topic 4)

The postal service uses a system based on the Microsoft Database to manage the delivery of packages.

To improve the delivery service, the management requires the delivery staff to use personal cell phones to communicate the location and the exact time of each delivery.

You need to design a solution. What should you do?

A. Create a button flow with user input for the delivery time and location

B. Create a UI flow that sends the delivery time and location

C. Create a button flow with full address and timestamp trigger tokens

**Answer: B**

#### Explanation:

Button trigger tokens are data points that are known and available to the device on which a button flow is running. These tokens change based on factors such as the current time or the geographic location of the device at a given moment.

Note: For example, if you are running a button flow on a smart phone, it is likely that the phone knows the time at your current location as well as the date and your current address. In this context, the time, date and address where the phone is located are all determined at the time the button flow runs. They are automatically available for use in any button flows that are executed on the device. You can use these trigger tokens to build useful flows that will minimize repetitive tasks such as providing your location to someone or tracking how much time you spent on a particular job/service call.

Reference:

<https://docs.microsoft.com/en-us/power-automate/introduction-to-button-trigger-tokens>

#### NEW QUESTION 107

- (Topic 4)

A company has a Common Data Service custom entity that stores customer account data. You need to create a relationship between the custom entity and the Account entity. Which two tools can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. Power Platform Admin center

B. Power Apps Maker portal

C. SQL Server Management Studio

D. Visual Studio Code

**Answer: BC**

#### Explanation:

There are two designers you can use to create and edit 1:N (one-to-many) or N:1 (many-to-one) relationships:

? You can create and edit 1:N (one-to-many) or N:1 (many-to-one) entity relationships in Power Apps portal

? You can create and edit create and edit 1:N (one-to-many) or N:1 (many-to-one) entity relationships using solution explorer

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/create-edit-1n-relationships>

#### NEW QUESTION 111

HOTSPOT - (Topic 4)

HOTSPOT

Users in your company vote on color choices for marketing materials by using the following canvas app:

Enter new color:

Marine blue

Add color

Color Options

☐ Sky blue

☒ Dark blue

☐ Marine blue

Clear Selection

Users enter color names into a text control and then select Add color to add the color to the Color options radio control. You must remove all the listed colors when a user selects Clear Selection  
You need to implement the functionality.  
Which Power Fx formulas should you use? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point.

Answer Area

Action	Power Fx formula
User selects <b>Add color</b> .	<div><div>If(txtColor.Value &lt;&gt;"", Collect(ColorList, txtColor.Value))</div><div>If(txtColor.Value &lt;&gt;"", Collect(ColorList, txtColor.Value))</div><div>If(Value(txtColor.Text) &lt;&gt;"", Collect(ColorList, txtColor.Text))</div><div>If(Value(txtColor.Color) &lt;&gt;"", Collect(ColorList, txtColor.Color))</div></div>
User selects <b>Clear Selection</b> .	<div><div>Revert(radioselector); ClearCollect(ColorList, txtColor.Value)</div><div>Reset(radioselector); Clear(ColorList)</div><div>Reset(radioselector); Refresh(ColorList)</div><div>Revert(radioselector); Remove(ColorList)</div><div>Revert(radioselector); ClearCollect(ColorList, txtColor.Value)</div></div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Action	Power Fx formula
User selects <b>Add color</b> .	<div><div>If(txtColor.Value &lt;&gt;"", Collect(ColorList, txtColor.Value))</div><div>If(txtColor.Value &lt;&gt;"", Collect(ColorList, txtColor.Value))</div><div>If(Value(txtColor.Text) &lt;&gt;"", Collect(ColorList, txtColor.Text))</div><div>If(Value(txtColor.Color) &lt;&gt;"", Collect(ColorList, txtColor.Color))</div></div>
User selects <b>Clear Selection</b> .	<div><div>Revert(radioselector); ClearCollect(ColorList, txtColor.Value)</div><div>Reset(radioselector); Clear(ColorList)</div><div>Reset(radioselector); Refresh(ColorList)</div><div>Revert(radioselector); Remove(ColorList)</div><div>Revert(radioselector); ClearCollect(ColorList, txtColor.Value)</div></div>

NEW QUESTION 115

DRAG DROP - (Topic 4)

You plan to create apps for a company.

You need to identify the Power Platform tools required.

What should you use? To answer, drag the appropriate tools to the correct requirements. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Tools	Requirement	Tool
Power Virtual Agents bot	Create an app with a customized user interface that allows users to quickly create support tickets.	Tool
Power Automate	Create an app that uses a guided business process to navigate through all records associated with a support ticket.	Tool
Canvas app	Send an email to a customer support manager every time a support ticket is created.	Tool
Model-driven app	Create an automated chat tool that guides a customer through the support ticket creation process.	Tool

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Canvas App

Box 2: Model-driven app

Model-driven app design is a component-focused approach to app development. Model- driven app design doesn't require code and the apps you make can be simple or very complex. Unlike canvas app development where the designer has complete control over app layout, with model-driven apps much of the layout is determined for you and largely designated by the components you add to the app.

Box 3: Power Automate

Power Automate is a service that helps you create automated workflows between your favorite apps and services to synchronize files, get notifications, collect data, and more.

Box 4: Power Virtual Agents bot

When you create bots with Power Virtual Agents, you author and edit topics.

NEW QUESTION 117

- (Topic 4)

A company is using Power Virtual Agents in Microsoft Teams to expose Microsoft Dataverse data to employees.

You create a chatbot that retrieves a list of customers by postal code from a Dataverse table. The chatbot will accept requests from a user and must connect to Dataverse to retrieve the data.

You need to connect the chatbot to the Dataverse table. What should you use?

- A. Table
- B. Power Apps
- C. Microsoft Teams
- D. Power Virtual Agents
- E. Power Automate

Answer: C

Explanation:

Dataverse for Teams is the "lite" version of Dataverse. It is a low-code platform designed to build relatively simple (but still powerful) apps, using a user-friendly interface and remaining within Microsoft Teams. This new update means that users now have the possibility to create Power Apps apps, Power Automate flows and Power Virtual Agents bots without leaving the Teams platform.

Reference:

https://docs.microsoft.com/en-us/learn/paths/work-power-platform-teams/

https://docs.microsoft.com/en-us/learn/modules/create-chatbot-power-virtual-agents-dataverse-teams/5-call-action-pull-data

NEW QUESTION 121

HOTSPOT - (Topic 4)

Rangers in national parks report wildlife they encounter during patrols. The rangers record observations in a notebook when they are on patrol. The rangers manually enter observation data when they are in the office. You are designing an app that allows rangers to record their observations while they are on patrol. The wildlife is modeled as a custom table named Wildlife. The model has relationships to the annotation entity and to a custom entity named Wildlife Details. In the Wildlife Details entity, rangers capture more information as they observe an animal's habitat. When observing wildlife, rangers must indicate whether an animal requires medical attention. The app must synchronize and save data to Common Data Service when connectivity is available.

You need to design the app.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Action
Enter notes related to wildlife records.	<div><div></div><div>Enable the Wildlife entity and annotation entity for mobile offline. Enable the attachments entity and the annotation entity for mobile offline. Enable the Wildlife entity for mobile offline and enable attachments on the Wildlife entity. Enable the Wildlife entity for mobile offline and use the timeline control for the Wildlife form.</div></div>
Enter wildlife details as related records.	<div><div></div><div>Allow feedback on the Wildlife Details entity. Enable the Wildlife Details entity for mobile offline. Enable change tracking on the Wildlife Details entity. Enable attachments on the Wildlife Details entity and enable the Wildlife Details entity for mobile offline.</div></div>
Indicate that an animal requires medical attention.	<div><div></div><div>Create a business rule. Create a business process. Create a Power Automate flow</div></div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Enable the Wildlife entity and the annotation entity for mobile offline

Note: As part of the 2020 Wave 2 release, we made generally available offline capabilities for model driven apps for users of Power Apps. Makers and administrators can now configure apps to be available offline on a user's device, and users can continue to complete their tasks against the local cache on their phone even with intermittent or no network connectivity. When the network is re-established, the users' changes are seamlessly synchronized back to the cloud.

Box 2: Enable attachments on the Wildlife Details entity and enable Wildlife Details entity for mobile offline.

Box 3: Create a business process.

Business process flows. Ensure that people enter data consistently and follow the same steps every time they work in an app by creating a business process flow.

Note: Power Automate includes several types of processes, each designed for a different purpose:

? Automated flows. Create a flow that performs one or more tasks automatically

? Button flows.

? Scheduled flows. Create a flow that performs one or more tasks on a schedule such as once a day, on a specific date, or after a certain time.

? Business process flows. Ensure that people enter data consistently and follow the same steps every time they work in an app by creating a business process flow.

? Workflows and actions. Dynamics 365 customizers may be familiar with the classic Microsoft Dataverse processes, which are workflows and actions.

#### NEW QUESTION 125

- (Topic 4)

You create a Microsoft Power BI report with multiple visualizations displayed together. The report must be available to users in all security roles. You need to display the report in a model-driven app. What should you embed?

- A. Power BI dashboard on a model-driven form.
- B. Power BI tile on a model-driven form.
- C. Power BI dashboard on a model-driven dashboard.
- D. Power BI tile on a model-driven dashboard.

**Answer: D**

#### NEW QUESTION 129

- (Topic 4)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company is deploying Microsoft Power Platform components to streamline a job candidate screening process.

The human resources (HR) representatives of the company plan to attend school career fairs. The HR representatives must qualify and enter potential job candidates into a Power Apps app. The HR representatives must enter the following information for each candidate:

Field name	Data type	Criteria for follow up
Name	Text	No
Degree	Text	Yes
First available hire date	Date	Yes
Initial impression	Integer 0-10	Yes
Resume	Picture	No
Not currently viable	Boolean	Yes
Follow up	Boolean	NA

If a candidate is currently unqualified for a job position but would eventually qualify based on follow-up criteria, the follow-up checkbox must be selected or cleared in the system immediately.

The company plans to create a similar Power Apps app that will contain the same business use case, but for internal employees and promotions.

You need to create a Power Apps app solution to automatically mark the candidate for follow up.

Proposed solution: Create a Power Automate flow with conditions that use entered data as default data.

Does the solution meet the goal?

- A. Yes
- B. No

**Answer: B**

#### Explanation:

Instead use Common Data Service workflow with a PowerQuery on the data entity.

Note: Process (Workflow) table/entity reference is a set of logical rules that define the steps necessary to automate a specific business process, task, or set of actions to be performed. Common Data Service workflow support: Filter triggers based on which attributes change - You can control which field changes trigger your automated flows. For example, trigger your flow only when the status field changes while ignoring all other fields that may change.

Reference:

<https://docs.microsoft.com/en-us/business-applications-release-notes/april19/microsoft-flow/automated-parity-classic-common-data-service-workflows>

#### NEW QUESTION 131

DRAG DROP - (Topic 4)

DRAG DROP

You are creating a Power Automate cloud flow to update a column on each Item in a list of Microsoft Dataverse records. Records are sorted in order of priority.

You must use a complex expression to determine the column value. The column value must be stored in a variable to make future maintenance easier. Records must be processed based on the sorted order.

You need to add flow steps to process the list of records.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

Filter the array.
Use the Apply to each loop running in parallel.
Initialize the variable.
Use the Apply to each loop running sequentially.
Set the variable.
Update the Microsoft Dataverse row.

>
<

**Answer Area**

^
v

A. Mastered

B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 135

- (Topic 4)

You create an automated flow by using Power Automate. The flow appears under My Flows and is connected to the development environment. The development environment has a solution to move components into a production environment. You need to ensure that you can transfer the flow to another environment. What should you do?

- A. Add the flow to the default solution of the development environment and export as a managed solution.
- B. Change the environment for the flow.
- C. Add the flow to the existing solution.
- D. Add the flow to the default solution of the production environment.

Answer: A

Explanation:

It is very normal for a developer to build the power automate in one environment and then export that automate & import it to another destination environment. Exporting our Solution  
After validating our flows work in our test environment, we now want to promote it to our production environment. We can export our solution by finding it in our Solutions experience, clicking on the ..., selecting Export.  
Reference:  
<https://flow.microsoft.com/en-us/blog/solutions-in-microsoft-flow/>

NEW QUESTION 138

- (Topic 4)

A company creates multiple cases in Microsoft Dataverse each day with a status of New. For all cases with a status of New, the system must send an email to the customer and then change the status to in Process. You need to create a Microsoft Power Automate cloud flow to automatically send the email. What should you do?

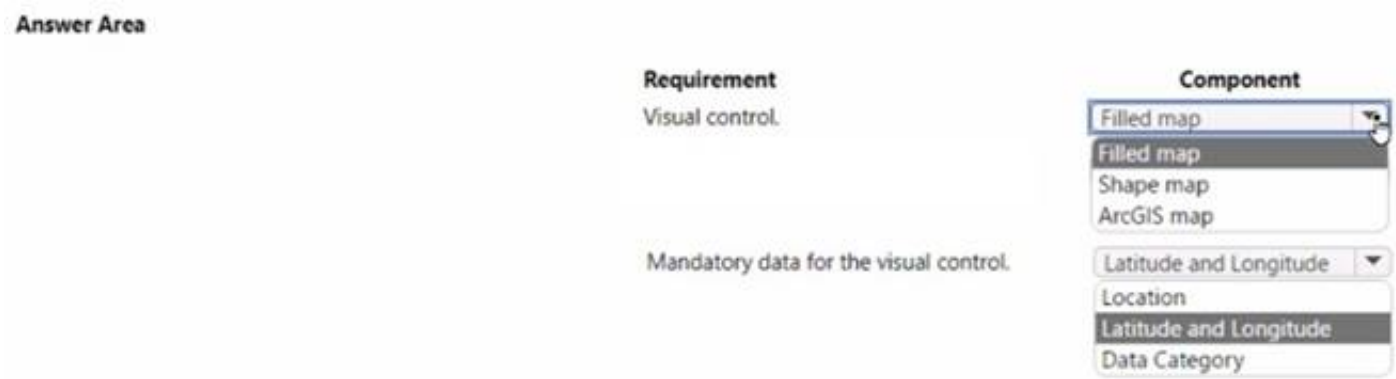

- A. Trigger the flow on a schedule and then configure the flow to use the Compose data operation to get a list of cases and send email to each from inside a loop.
- B. Trigger the flow on a schedule and then configure the flow to use the Dataverse Listrows action to query case records using a filter and send email to each from inside a loop.
- C. Trigger the flow manually on the case and then configure the flow to send the email.

Answer: B

NEW QUESTION 141

HOTSPOT - (Topic 4)

A state planning department stores demographic data in a local SQL Server database. The department uses a local report server to analyze the data for land development purposes. You need to create a visual to display the demographic data. Which component should you use? To answer, select the appropriate option in the answer area. NOTE: Each correct selection is worth one point.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Requirement

Visual control.

Mandatory data for the visual control.

Component

NEW QUESTION 143

- (Topic 4)  
A company uses Microsoft Teams. A coworker creates a chatbot. The coworker observes unexpected behavior with the chatbot. You need to troubleshoot the chatbot.  
Which two actions should you recommend to the coworker? Each correct answer presents part of the solution.  
NOTE: Each correct selection is worth one point.

- A. Ask the coworker to assign you to the owner role for the team.
- B. In Advanced tools, select Monitor.
- C. Ask the coworker to add you to their team.
- D. Select the chatbot and then select the Share button.

Answer: AB

NEW QUESTION 144

- (Topic 4)  
DRAG DROP  
A company uses Power Apps and Microsoft Dataverse.  
The company has three solutions that you must move to a target environment:  
• One solution is created for security roles. You must be able to add roles to the solution in the target environment  
• One solution is created for table additions and modifications. Table structures must be updated in the solution in the target environment.  
• One solution is for customizations. The custom actions must not be modified in the solution in the target environment  
You need to create the solutions.  
Which type of solutions should you create? To answer, drag the appropriate solutions to the correct requirements- Each solution may be used once, more than once, or not at all You may need to drag the split bar between panes or scroll to view content.

NEW QUESTION 146

DRAG DROP - (Topic 4)  
A company uses Power Apps. You design the interface for a new model-driven app.  
Users must interact with data from records related to the primary record form in the following ways:  
• Use related business process flows.  
• Display primary and related form columns.  
You need to configure the forms without using additional customizations.  
Which form types should you use? To answer, drag the appropriate form types to the correct requirements. Each form type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.  
NOTE: Each correct answer is worth one point.

Form types

Quick view form

Main form dialog

Quick create form

Main form component control

Answer Area

Requirement

Use related business process flows.

Display related columns along with other primary form columns.

Form type

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

<b>Form types</b>		<b>Requirement</b>	<b>Form type</b>
Quick view form		Use related business process flows.	Main form component control
Main form dialog		Display related columns along with other primary form columns.	Quick view form
Quick create form			
Main form component control			

NEW QUESTION 151

DRAG DROP - (Topic 4)

You create a custom field on the Account entity.

Members of TeamA must have full access to the field. Members of TeamB must have no access to the field.

You need to configure security.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

<b>Actions</b>	<b>Answer Area</b>
Add TeamA to the field security profile.	
Create a field security profile and set all the permissions for the custom attribute to <b>Yes</b> .	
Add TeamB to the field security profile.	
Create a field security profile and set all the permissions for the custom attribute to <b>No</b> .	
Enable field-level security for the field.	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Step 1: Enable field security for the field

Step 2: Create a field security profile and set all the permissions for the custom attribute to Yes.

Step 3: Add TeamA to the field security profile.

Note: Field-level security is available for the default fields on most out-of-box entities, custom fields, and custom fields on custom entities. Field-level security is managed by the security profiles. To implement field-level security, a system administrator performs the following tasks.

? Enable field security on one or more fields for a given entity.

? Associate one more existing security profiles, or create one or more new security profiles to grant the appropriate access to specific users or teams.

NEW QUESTION 153

- (Topic 4)

You create a canvas app named Hardware Order that suggests computer hardware to customers.

A value must be entered for the EmployeeID field when creating a new order if the value in the OrderType field does not contain the prefix test.

You need to configure the business rule.

Which two actions should you perform? Each correct answer presents part of the complete solution.

NOTE: Each correct selection is worth one point.

- A. Set the scope of the business rule to Entity.
- B. Add a Recommendation action and configure it to enter the order type.
- C. Set the scope of the business rule to All Forms.
- D. Use the following condition expression:(OrderType Does not begin with [test]) AND (Modified By Does not contain data)

Answer: AD

Explanation:

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/data-platform-create-business-rule>

NEW QUESTION 155

- (Topic 4)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company is deploying Microsoft Power Platform components to streamline a job candidate screening process.

The human resources (HR) representatives of the company plan to attend school career fairs. The HR representatives must qualify and enter potential job candidates into a Power Apps app. The HR representatives must enter the following information for each candidate:

Field name	Data type	Criteria for follow up
Name	Text	No
Degree	Text	Yes
First available hire date	Date	Yes
Initial impression	Integer 0-10	Yes
Resume	Picture	No
Not currently viable	Boolean	Yes
Follow up	Boolean	NA

If a candidate is currently unqualified for a job position but would eventually qualify based immediately.

The company plans to create a similar Power Apps app that will contain the same business use case, but for internal employees and promotions.

You need to create a Power Apps app solution to automatically mark the candidate for follow up.

Proposed solution: Create a custom action that has defined dataflows.

Does the solution meet the goal?

A. Yes

B. No

**Answer: B**

**Explanation:**

Instead use Common Data Service workflow with a PowerQuery on the data entity.

Note: Process (Workflow) table/entity reference is a set of logical rules that define the steps necessary to automate a specific business process, task, or set of actions to be performed. Common Data Service workflow support: Filter triggers based on which attributes change - You can control which field changes trigger your automated flows. For example, trigger your flow only when the status field changes while ignoring all other fields that may change.

Reference:

<https://docs.microsoft.com/en-us/business-applications-release-notes/april19/microsoft-flow/automated-parity-classic-common-data-service-workflows>

**NEW QUESTION 157**

- (Topic 4)

You are creating an employee directory canvas app. The app must display name, address, and a photo of each employee. You need to select a control type that will display the

A. Address input

B. List box

C. Gallery

D. Data table

**Answer: C**

**NEW QUESTION 162**

HOTSPOT - (Topic 4)

A company is building a canvas app.

A user needs to understand which data they can make available for the 500 contacts that are present in the Contact table. All relevant data must be shown in the app. Single fields must show one record and grids must show multiple records. Only the primary fields for each related table should be shown for a contact.

Display name	Relationship name	Related table	Relationship type	Type	Customizable
Company Name	contact_customer_contacts	Contact	Many-to-one	Managed	Yes
Connected From	contact_connections1	Connection	One-to-many	Managed	Yes
Owning Team	Team_contacts	Team	Many-to-one	Standard	Yes

Use the drop-down menus to select the answer choice that answers each question based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

How should you design a screen to display the Connection table information for each contact in the Contacts table?

▼

Use a grid for the Contact table and a grid for the Connection table

Use a single field for the Contact table and a grid for the Connection table

Use a grid for the Contact table and a single field for the Connection table

Use a single field for the Contact table and a single field for the Connection table

How should you design a screen to display the Team table information for each contact in the Contact table?

▼

Use a grid for the Contact table and a grid for the Team table

Use a single field for the Contact table and a grid for the Team table

Use a grid for the Contact table and a single field for the Team table

Use a single field for the Contact table and a single field for the Team table

A. Mastered

B. Not Mastered

**Answer: A**

**Explanation:**

Box 1: Use a single field for Contact table and a grid for the Connection table The Contact table is on 1-side of the 1-to-many relation to the Connection table.  
 Box 2: Use a single field for Team table and a grid for the Connect table The Team table is on 1-side of the 1-to-many relation to Contact.

**NEW QUESTION 163**

HOTSPOT - (Topic 4)

HOTSPOT

Inspectors for a city building department use a Microsoft Teams channel, inspectors use SharePoint to view construction bylaws, rules, and regulations.

The city clerk email inspectors links to new bylaw proposal, inspectors vote on the proposals and provide additional feedback.

You need to demonstrate to the city clerk how they can automate the process

Which option should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

**Flow element**

Type of flow.

**Option**

Cloud flow
Desktop flow
Business process flow

Trigger type.

Manually trigger a flow.
For a selected message in Microsoft Teams.
For a selected file in SharePoint.
When a flow is run from a business process flow.

Flow step to replace emailing the links.

Get changes for an item in SharePoint.
Post an adaptive card to a channel and wait for a response.
Post a choice of options to a user in Teams.
Send an email with options.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**NEW QUESTION 168**

- (Topic 4)

A company uses a canvas app to encourage employees to take reading breaks during their work schedule. The reading breaks are created automatically as Outlook tasks in the employees Outlook app. The app must trigger a Power Automate cloud flow when specific data is captured in the canvas app. You need to create and configure the flow. Which flow step should you configure first?

- A. Flow button for mobile
- B. Power Apps step with trigger conditions
- C. New Microsoft Outlook task
- D. Condition step

**Answer:** A

**NEW QUESTION 173**

HOTSPOT - (Topic 4)  
You use Microsoft Power BI Desktop to create a report. Users note that column headings are confusing.  
You need to modify some columns and delete other columns.  
Which tool should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Modification	Tool
Rename a column	<div>Power Query Editor</div> <div>Report canvas</div> <div>Filters pane</div> <div>Power Query Editor</div>
Delete a column	<div>Fields pane</div> <div>Report canvas</div> <div>Fields pane</div> <div>Filters pane</div>

#### NEW QUESTION 175

- (Topic 4)

A company is using Microsoft Power Platform and Microsoft Teams to approve work contracts.

A manager must view all approved contracts in the past year that the company sent or received. The manager must approve any pending contracts. The solution must minimize effort.

You need to recommend a solution for the company. What should you recommend?

- A. Create a Microsoft Teams team with a tab that exposes all approvals.
- B. Install the Microsoft Teams approvals app.
- C. Embed a Power Apps app within a Microsoft Teams channel.
- D. Create a Power BI dashboard that includes all approval requests.
- E. Embed a SharePoint list into a Microsoft Teams channel.

**Answer: B**

#### NEW QUESTION 179

- (Topic 4)

You use a Microsoft SharePoint list to record information about customers.

You must perform a series of actions only when a new item is added to a SharePoint list. You need to configure a Power Automate flow.

Which trigger should you use?

- A. When an item is created
- B. When an item is created or modified
- C. When a file is created (properties only)
- D. For a selected item

**Answer: A**

#### Explanation:

Trigger - When an item is created Triggers when an item is created.

MS Flow will trigger when an item is created in the list. It will return all list item properties which can be used in the Flow.

Reference:

<https://www.c-sharpcorner.com/article/sharepoint-based-triggers-in-ms-flow-part-2/>

#### NEW QUESTION 181

DRAG DROP - (Topic 4)

DRAG DROP

A company uses Power Apps and Microsoft Dataverse.

The company has model driven apps across multiple Microsoft Dataverse environments in the same tenant. You must grant privileges to Power Apps makers to achieve the following:

- Share model-driven apps in multiple Microsoft Dataverse environments.
- Share model-driven apps in only one of the Microsoft Dataverse environments and view only table records that they create themselves.

You need to share the model-driven app with users by using the principle of least privilege. Which security role privilege should you grant for each requirement? To answer, drag the

appropriate security roles to the correct requirements. Each security role may be used once,

more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct answer is worth one point.

Security roles	Answer Area	Requirement	Security role
System Customizer		Share in all Microsoft Dataverse environments.	
Microsoft Power Platform Administrator		Share in one environment and view only table records they create.	
Environment Maker			

- A. Mastered
- B. Not Mastered

**Answer: A**

#### Explanation:

Security roles	Answer Area	Requirement	Security role
System Customizer		Share in all Microsoft Dataverse environments.	Environment Maker
Microsoft Power Platform Administrator		Share in one environment and view only table records they create.	System Customizer
Environment Maker			

#### NEW QUESTION 186

DRAG DROP - (Topic 4)

You have a model-driven app that has an entity named Marinas. You have an entity named Boats that list the boats associated with each marina.

You must add a list of boats to the Marinas form. You must also add an option for users to select different views including boat owners and marina members.

You need to embed the list of boats associated with a Marina record in the entity form.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Add a Subgrid component to a form

Select **Show related records** and then select the related entity and default view for the subgrid

Save and publish the form

Select the **Allow users to change view** option

Answer Area

>

<

&u2191

⇊

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Step 1: Add a Subgrid component to a form  
You add a subgrid component the same way as you add any other component.  
Step 2: Select Show related records and then select the related entity and default view for the subgrid  
Configure a subgrid component.  
Properties available to configure when using a subgrid component on a form using the form designer include:  
? Show related rows  
When selected, the subgrid displays only rows related to the current row that is displayed on the form.  
Step 3: Select the Allow users to change view  
Configure a subgrid component.  
Properties available to configure when using a subgrid component on a form using the form designer include:  
? Allow users to change view  
When selected, app users can change from the Default view to another view of the table selected in the Table property.  
Step 4: Save and publish the form

NEW QUESTION 191

DRAG DROP - (Topic 4)  
A company uses Power Automate and Power Apps to streamline business processes. You need to use AI Builder to analyze customer reviews of the company's products.  
In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Action

Publish the model.

Connect data to the model.

Train the model.

Use the model in a Power Automate flow.

Answer Area

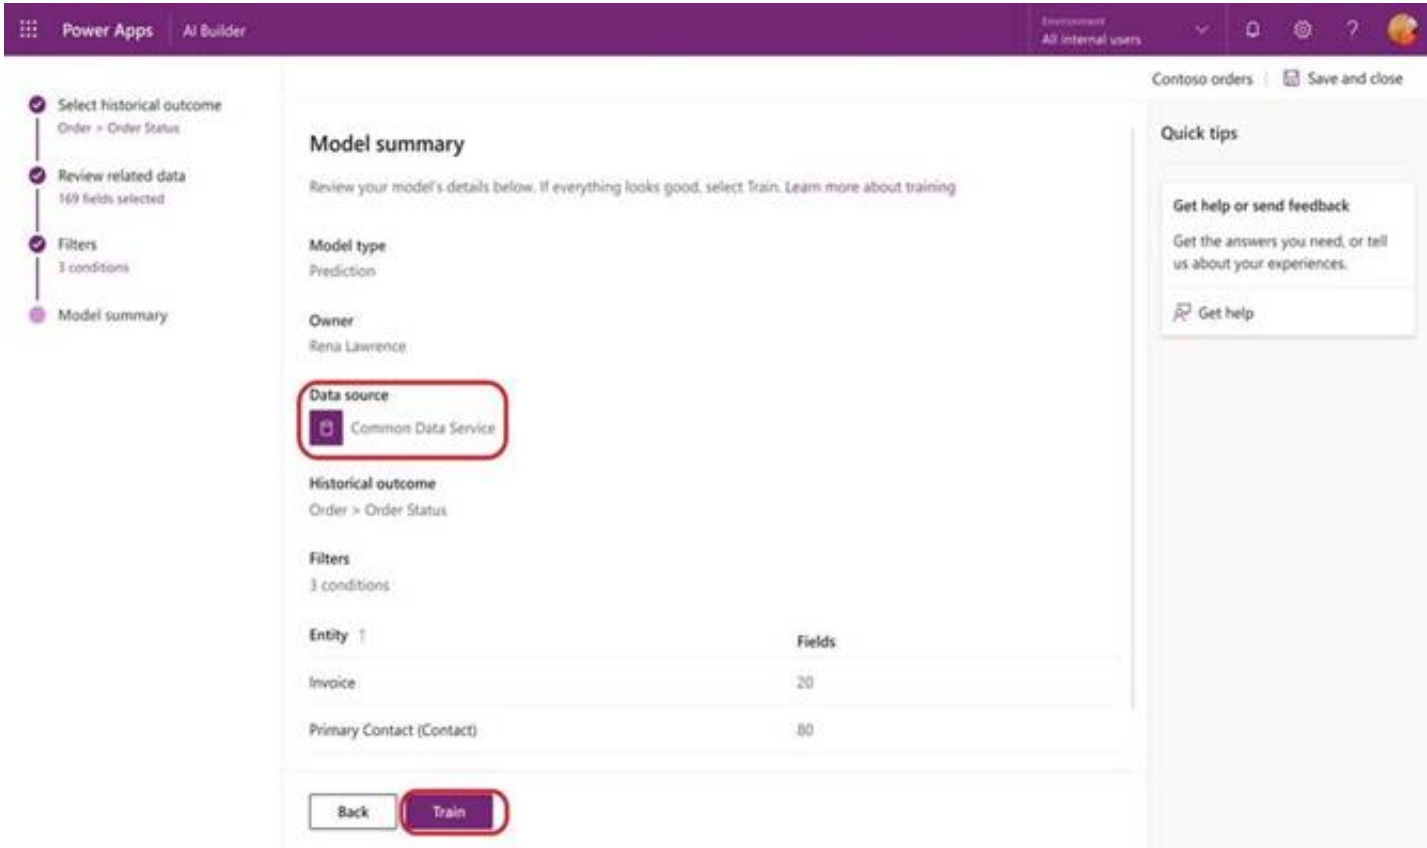

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Step 1: Connect data to the model.  
First create an AI Builder form processing model for the customer reviews you want to process.

Step 2: Train the model. Step 3: Publish the model.  
Step 4: Use the model in a Power Automate flow.  
Once you train and publish the model, create a solution-aware flow in Power Automate.

NEW QUESTION 196

HOTSPOT - (Topic 4)  
HOTSPOT

A bicycle shop uses Microsoft Dataverse to track bicycle rentals and renter information. The bicycle shop has a standalone tablet with a canvas app. Renters use the app to check out bicycles. Only one renter at a time can check out bicycles. Multiple renters can rent as a team. You must expand the app to allow team rentals in one step. All team members must be registered under a single phone number. You need to modify the canvas app to display team and team member information, along with bicycle information. Which UI elements should you use for each requirement? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point.

Answer Area

Requirement	UI element
Phone number lookup	<div>Choice</div> <div>Text input</div> <div>Choice</div> <div>Pen input</div>
Team members and their bicycles	<div>Gallery</div> <div>List box</div> <div>Container</div> <div>Data table</div> <div>Gallery</div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Requirement	UI element
Phone number lookup	<div>Choice</div>
Team members and their bicycles	<div>Gallery</div>

NEW QUESTION 197

- (Topic 4)

You have a Power Automate flow that processes files in a Microsoft SharePoint document files. Before leaving the office for the day, the manager must initiate the flow. The flow must not start processing files before 11:00 PM. You need to configure the flow. Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Add a recurrence trigger and configure to run daily at 11 00 PM.
- B. Add a Condition action
- C. If the time greater than 11:00 PM use a Terminate action prevent further processing.
- D. Manually trigger the flow.

E. Add a Delay Until action and enter the timestamp for 11 00 PM.

**Answer:** CD

**Explanation:**

Delay an action until a specific timestamp.

Note: The Microsoft Dataverse connector provides four ways to add wait conditions. Use these wait conditions when you need to delay processing in your flows until a particular condition is met.

? Postpone triggering the flow and the first action until a specific time: Wait condition using Postpone Until.

? Add a fixed delay before the next step.

? Delay an action until a specific timestamp.

? Delay an action until a specific event occurs.

Reference:

<https://docs.microsoft.com/en-us/power-automate/dataverse/wait-conditions>

**NEW QUESTION 198**

- (Topic 4)

A company has hundreds of warehouses. You are developing an app for the shipping department at the company. The app must be able to provide the warehouse address for shipments. You need to create the warehouse field on the app form. Which field type should you use?

A. Chores

B. Choice

C. Text

D. Lookup

**Answer:** D
