### NEW QUESTION 4

- (Topic 5)

You have a Microsoft 365 E3 subscription that contains 500 users. All the users have computers that run Windows 10 and are joined to Azure AD.

You need to generate a report that identifies which documents the users copied from Microsoft Teams to USB devices.

What should you do first?

A. Onboard the Windows 10 computers to Endpoint data loss prevention (Endpoint DLP).

B. Assign the Microsoft 365 E5 compliance add-on to each user.

C. Create a custom data loss prevention (DLP) policy.

D. Assign the Enterprise Mobility + Security E5 add-on to each user.

**Answer: B**

#### Explanation:

According to the Microsoft documentation<sup>1</sup>, to generate a report that identifies which documents the users copied from Teams to USB devices, you need to use advanced hunting on Microsoft Defender ATP. Advanced hunting lets you run queries to find threat activity involving USB devices, such as mounting and unmounting of USB drives or copying of files<sup>2</sup>.

To use advanced hunting, you need to have one of the following roles:

? Security administrator

? Security reader

? Security operator

? Global administrator

The Groups Administrator role does not have access to advanced hunting or Microsoft Defender ATP.

Therefore, based on this information, the correct answer is B. Assign the Microsoft 365 E5 compliance add-on to each user. This add-on includes Microsoft Defender ATP and allows you to use advanced hunting features<sup>3</sup>. Alternatively, you can request one of the roles that have access to advanced hunting, such as Security administrator or Global administrator.

#### NEW QUESTION 49

- (Topic 5)

You have a Microsoft 365 subscription that uses Microsoft Teams.

You need to identify which teams were inactive during the past 90 days. What should you use?

- A. Teams advisor
- B. the Office 365 Groups activity report
- C. the Teams user activity report
- D. the Teams usage report

**Answer:** D

#### Explanation:

According to the Microsoft documentation<sup>1</sup>, you can use the Teams usage report in the Microsoft Teams admin center to get an overview of the usage activity in Teams. This includes the number of active users, channels, guests, and post messages via chat and conversations to know how many users in each team are actively using Teams to communicate and collaborate. However, this report only shows the last 7 or 28 days of activity of teams, which may not be enough to identify inactive teams over a longer period. Alternatively, you can use PowerShell scripts to generate activity reports that check the audit records of inactive teams and provide an HTML report file based on SharePoint site activity in the group's document library in the past 90 days and conversations that occurred in the mailbox in the past year<sup>2</sup>. However, this method requires writing complex and time-consuming PowerShell commands, which may not be feasible for administrators who need to produce multiple reports on a daily basis.

Another method to detect inactive teams in your Teams environment is by setting an expiration policy for the associated group in Azure AD. This notifies the owner of the team or group by sending an email to renew or delete the team after specified days if no activity is detected<sup>3</sup>. However, this method also has some drawbacks, such as:

? The owner may fail to notice the email or renew the team within the timeline of the configured policy, resulting in the team being deleted automatically and not being restorable after 30 days.

? The expiration policy applies to all Microsoft 365 groups in an Azure AD organization, not just Teams. This may affect other groups that are not related to Teams.

? The expiration policy requires Azure AD Premium licenses for the members of all groups to which the policy is applied.

Therefore, based on this information, the correct answer is D. the Teams usage report. This report is the most straightforward and accessible way to find inactive teams in Microsoft Teams, even though it has some limitations. The other options are either not related to finding inactive teams (Teams advisor) or require additional licenses or permissions (the Office 365 Groups activity report and the Teams user activity report).

Task 12

you need to create a Microsoft 365 group named TeamsAdmin that can manage Teams Phone configurations without being able to manage teams and channels.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

To create a Microsoft 365 group named TeamsAdmin that can manage Teams Phone configurations without being able to manage teams and channels, you need to use PowerShell to create the group and assign the Teams Communications Administrator role to it. Here are the steps to follow:

? Install the Azure Active Directory PowerShell for Graph module by running the following cmdlet: Install-Module -Name AzureAD

? Connect to Azure Active Directory by running the following cmdlet and entering your Microsoft 365 username and password:

Connect-AzureACreate a new Microsoft 365 group named TeamsAdmin by running the following cmdlet:

New-AzureADMSGGroup -DisplayName "TeamsAdmin" -Description "Group for managing Teams Phone configurations" -MailEnabled \$false -MailNickName "TeamsAdmin" - SecurityEnabled \$true -GroupTypes "Unified"

? Get the object ID of the new group by running the following cmdlet:

Get-AzureADMSGGroup -Filter "DisplayName eq 'TeamsAdmin'"

? Copy the object ID from the output and assign it to a variable, such as \$groupID, by running the following cmdlet:

\$groupID = "your-object-id"

Install the Microsoft Teams PowerShell module by running the following cmdlet:

Install-Module -Name MicrosoftTeams

? Connect to Microsoft Teams by running the following cmdlet and entering your Microsoft 365 username and password:

Connect-MicrosoftTeams

? Get the role ID of the Teams Communications Administrator role by running the following cmdlet:

Get-CsOnlineRole -Identity "Teams Communications Administrator"

? Copy the role ID from the output and assign it to a variable, such as \$roleID, by running the following cmdlet:

\$roleID = "your-role-id"

? Assign the Teams Communications Administrator role to the TeamsAdmin group by running the following cmdlet:

New-CsOnlineRoleAssignment -SecurityGroupId \$groupID -RoleDefinitionName \$roleID

Now, you have created a Microsoft 365 group named TeamsAdmin that can manage Teams Phone configurations without being able to manage teams and channels. You can add members to this group by using the Azure Active Directory admin center or PowerShell.

#### NEW QUESTION 98

SIMULATION - (Topic 4)

Task 1

Your company is opening a branch office in Miami. The office uses a network range of 10.10.10.0/24.

You need to restrict Teams bandwidth to 1.000 Kbps for all the users working at the Miami office. The solution must NOT affect other offices.

- A. Mastered
- B. Not Mastered

**Answer:** A

#### Explanation:

To restrict Teams bandwidth by network range, you can use the Network Roaming Policy feature<sup>1</sup>. This feature allows you to define different media bit rate settings for different network locations based on the IP address ranges. Here are the steps to accomplish your task:

? Create a new network roaming policy with the desired media bit rate settings. For example, you can use the following PowerShell cmdlet to create a policy named "MiamiPolicy" with a maximum bit rate of 1000 Kbps for audio and video:

```
New-CsTeamsNetworkRoamingPolicy -Identity "MiamiPolicy" -MaxMediaBitRateKb 1000
```

? Assign the network roaming policy to the network range of the Miami office. You can use the following PowerShell cmdlet to assign the policy to the 10.10.10.0/24 network range:

```
New-CsTeamsNetworkRoamingPolicyAssignment -PolicyName "MiamiPolicy" -IPAddressRange "10.10.10.0/24"
```

? Verify that the policy is applied correctly by using the Get-CsTeamsNetworkRoamingPolicyAssignment cmdlet. You should see something like this:

```
Identity : 10.10.10.0/24 PolicyName : MiamiPolicy
```

```
IPAddressRange : 10.10.10.0/24 EffectiveTime : 8/1/2023 1:18:24 PM LastUpdateTime : 8/1/2023 1:18:24 PM
```

```
LastUpdateBy : admin@XXXXXXXXXX.onmicrosoft.com
```

```
LastUpdateBySid : S-1-5-21-XXXXXXXXXX-XXXXXXXXXX-XXXXXXXXXX-XXXXX
```

Note: You may need to wait for some time for the policy to take effect.

Task 4

You need to add the following disclaimer as part of all Teams meeting invites: "Disclaimer: This meeting may be recorded for quality and training purposes."

- A. Mastered
- B. Not Mastered

**Answer:** A

#### Explanation:

To add a disclaimer to all Teams meeting invites, you can use the Exchange admin center to create a mail flow rule that applies the disclaimer to meeting requests. Here are the steps to follow:

? Sign in to the Exchange admin center with your Microsoft 365 username and password<sup>1</sup>.

? In the left navigation, go to Mail flow > Rules.

? Click Add (+) and then select Create a new rule.

? In the New rule pane, enter a name for the rule, such as "Meeting disclaimer".

? Under Apply this rule if, select A message header includes any of these words.

? In the Specify header name box, enter X-MS-Exchange-Calendar-Meeting- Request. This is a special header that identifies meeting requests<sup>2</sup>.

? In the Specify words or phrases box, enter True. This means that the rule will apply to any message that has the header set to True.

? Click Add and then OK.

? Under Do the following, select Append the disclaimer.

? In the Specify disclaimer text box, enter the disclaimer text that you want to add to the meeting invites, such as:

Disclaimer: This meeting may be recorded for quality and training purposes.
